SUPPLEMENTARY FIGURE

Supplementary Figure 1. Trangenerational effects of diabetes on testicular gene expression of the F₁ and F₂ male generations. The expression levels of genes encoding proteins associated with genes expressed in Sertoli cells: Wilms' tumour 1 (*Wt1*), SRY-box containing gene9 (*Sox9*), gap junction protein alpha 1 (*Gja1*) and claudin 11 (*Cldn11*); and apoptotic markers: cyclin-dependent kinase inhibitor 1A (*p21*), tumor protein p53 (*p53*), and B cell leukemia/lymphoma 2 (*Bcl2*) are shown (a, b) for the F₁ males (controls n = 8; diabetic group A n=10; diabetic group B n=5) and (c, d) for the F₂ males (controls n = 6; diabetic group A n=12; diabetic group B n=11). The graph illustrates the relative expression of the selected genes. The control group represents 100% and the percentage in the experimental groups represents the ratio of gene expression between the treated groups and the control group. The values are means ± SEM.
