

Supplementary Data

SUPPLEMENTARY FIG. S1. Effects of HJC0350 and GGTI-2147 on the electrically stimulated $[Ca^{2+}]_i$. (A) Typical effect of the Epac2 inhibitor, HJC0350 ($10 \mu M$), on the electrically stimulated $[Ca^{2+}]_i$ transient measured in fluo-4-loaded ARVMs. Similar results were obtained in four other cells. (B) Typical effect of the GGT-1 inhibitor, GGTI-2147 ($5 \mu M$), on the $[Ca^{2+}]_i$ transient. Similar results were obtained in four other cells.
