Running title: Porcine RFI-associated intestinal microbiota

#Address correspondence to: Gillian E. Gardiner, [ggardiner@wit.ie](mailto:ggardiner@wit.ie).

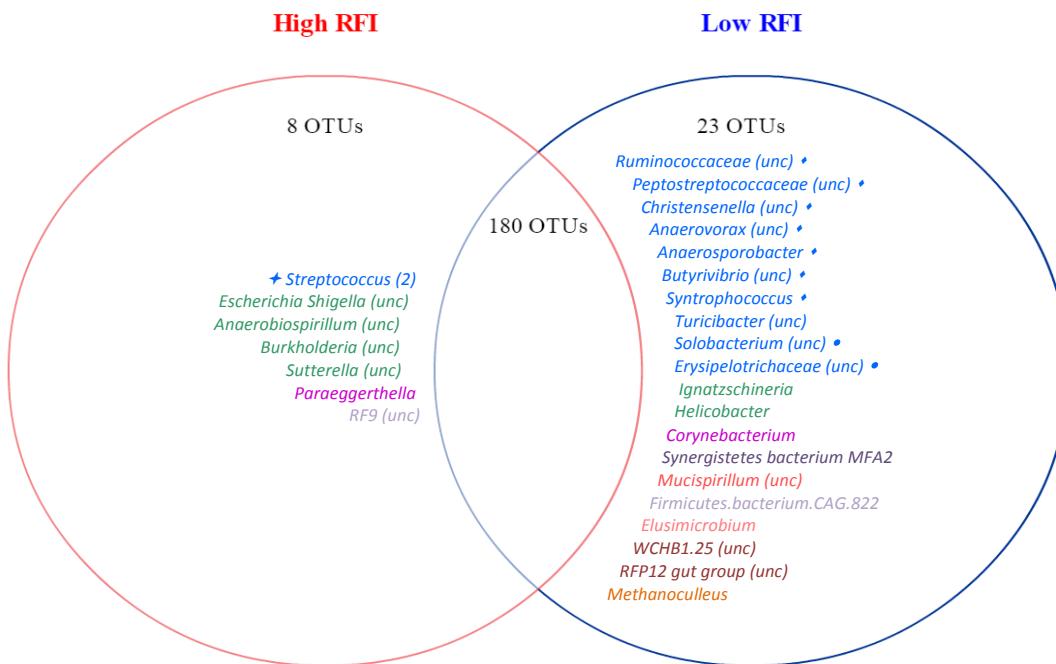

**Fig. S1.  $\alpha$ -diversity indices of the pig intestinal microbiota according to residual feed intake (RFI) rank and sample type (n=150) (colour coded by RFI rank).** <sup>1</sup>RFI: residual feed intake; 2pw: post-weaning. Low RFI: faeces (n=36), digesta (caecal n=12, ileal n=9); medium RFI: faeces (n=30), digesta (caecal n=10, ileal n=9); high RFI: faeces (n=30), digesta (caecal n=8, ileal n=6).

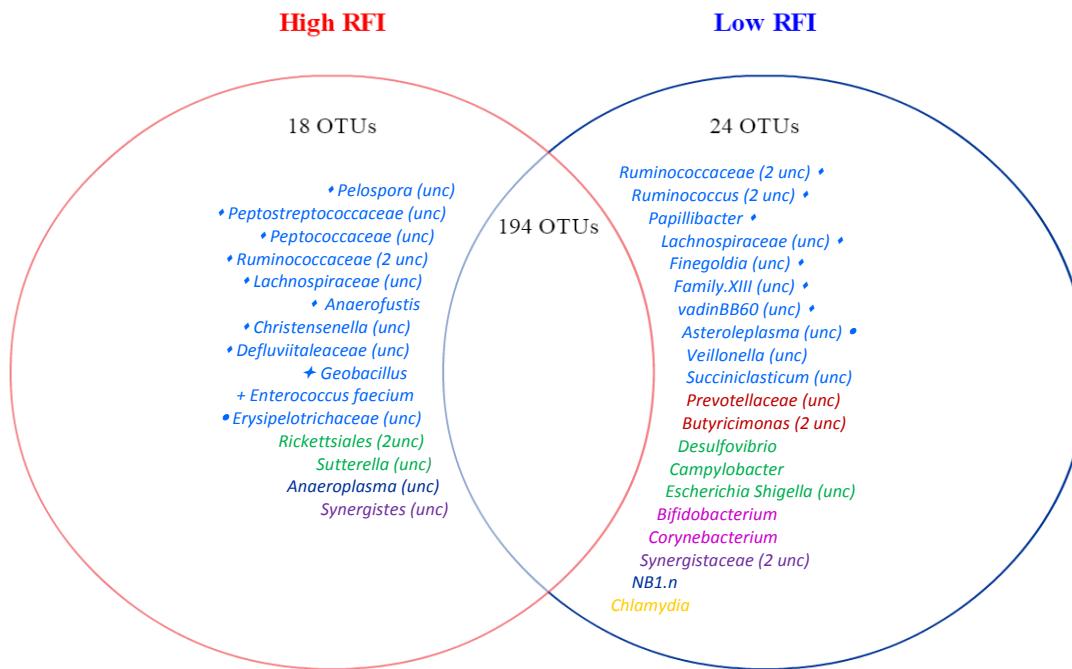

### A. Weaning faeces

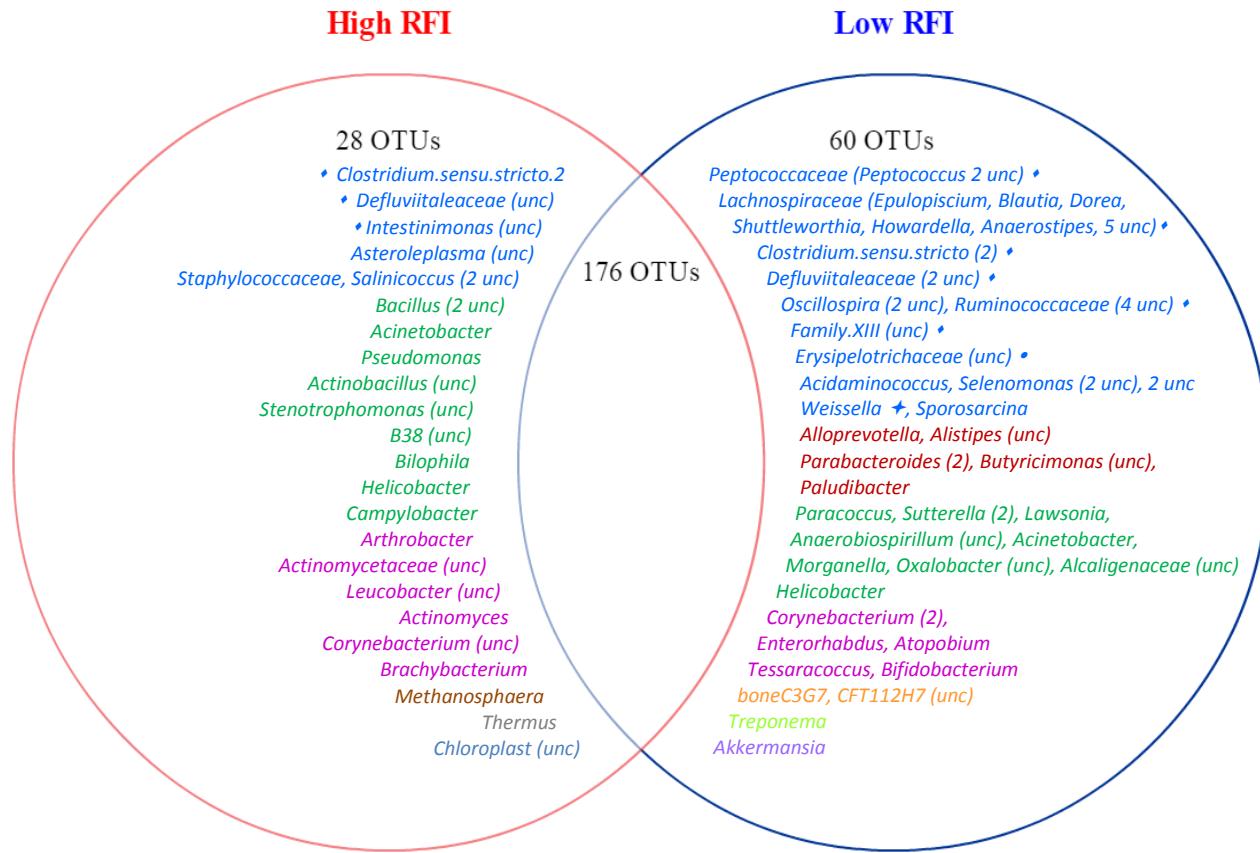

**B. Day 42 pw<sup>2</sup> faeces**

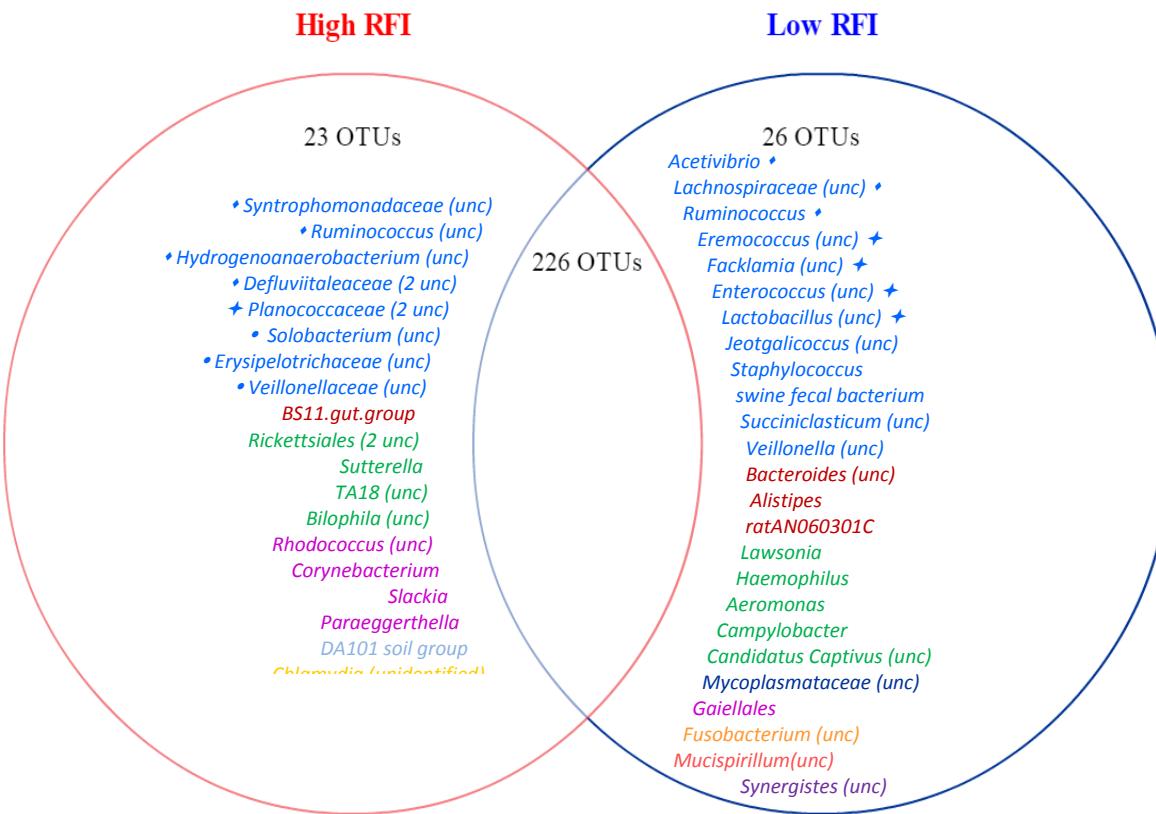

C. Day 138 pw faeces

#### D. Ileal digesta

## E. Caecal digesta

**Firmicutes** **Bacteroidetes** **Proteobacteria** **Actinobacteria** **Verrucomicrobia** **Deferribacteres**  
**Synergistetes** **Tenericutes** **Elusimicrobia** **Lentisphaerae** **Euryarchaeota** **Chlamydiae** **Fusobacteria**  
 Candidate division TM7 **Spirochaetae** **Cyanobacteria** **Deinococcus** **Thermus**  
 ♦ *Clostridia/Clostridiales* ♦ *Bacilli/Lactobacillales* • *Erysipelotrichia/Erysipelotrichales*

**Fig. S2. OTUs found exclusively in either high or low residual feed intake (RFI)-ranked pigs across all faecal time points (A-C) and for both intestinal locations (D, E), as well as those shared across RFI ranks (80% of the OTUs were shared at weaning, 85% at day 42 pw, 82% at day 138 pw and in the caecal digesta and 66% in the ileal digesta).**

Low RFI: faeces (n=36), digesta (caecal n=12, ileal n=9); medium RFI: faeces (n=30), digesta (caecal n=10, ileal n=9); high RFI: faeces (n=30), digesta (caecal n=8, ileal n=6).

<sup>1</sup>unc: uncultured; <sup>2</sup>pw: post weaning. Numbers in parentheses denote the number of OTUs present for a given taxon where there was more than one.

**Table S1. Composition and chemical analysis of diets used in the study (on an as-fed basis; g/kg)**

| Diet Type                                  | Starter          | Link             | Weaner           | Finisher         | Pregnant sow     | Lactating sow    |
|--|------------------|------------------|------------------|------------------|------------------|------------------|
| Barley                                     |                  |                  | 248.0            | 385.4            | 897.4            | 349.5            |
| Wheat                                      | 220.0            | 399.0            | 431.4            | 404.0            |                  | 432.4            |
| Maize                                      | 80.0             |                  |                  |                  |                  |                  |
| Soya                                       | 163.5            | 229.2            | 200.0            | 175.0            | 70.0             | 150.0            |

| Small intestine (g)       | 1453.5             | 1631.1             | 1595.7               | 112.73             | 0.54 |

High RFI: n=10, medium RFI: n=10, low RFI: n=12.

<sup>1</sup>Mean of data from days 135 and 138 post weaning; <sup>2</sup>Least square means and pooled standard error of means are presented. <sup>A,B,C</sup>Within each row, values that do not share a common superscript tend to be different (P≤0.10).

**Table S3. Effect of ranking pigs on residual feed intake (between weaning and day 126 post weaning) on ileal morphology<sup>1</sup>**

| Measure                              | High RFI          | Medium RFI        | Low RFI           | S.E.M <sup>2</sup> | P    |
|--------------------------------------|-------------------|-------------------|-------------------|--------------------|------|
| Villus height (μm)                   | 302.2             | 298.5             | 302.7             | 18.26              | 0.98 |
| Villus width (μm)                    | 116.8             | 117.6             | 153.3             | 15.89              | 0.18 |
| Crypt depth (μm)                     | 283.1             | 308.9             | 287.8             | 36.55              | 0.88 |
| Villus height : crypt depth          | 1.13              | 0.94              | 1.37              | 0.16               | 0.18 |
| No. of goblet cells/villus           | 19.6 <sup>a</sup> | 12.8 <sup>b</sup> | 12.1 <sup>b</sup> | 1.81               | 0.01 |
| No. of goblet cells/μm villus height | 0.06 <sup>a</sup> | 0.04 <sup>b</sup> | 0.04 <sup>b</sup> | 0.006              | 0.02 |

High RFI: n=10), medium RFI: n=10, low RFI: n=12.

<sup>1</sup>Ten villi were measured for each pig and the means were used for statistical analysis.

<sup>2</sup>Least square means and pooled standard error of means are presented.

<sup>a,b,c</sup> Within each row, values that do not share a common superscript are significantly different (P≤0.05).

**Table S4. Effect of ranking pigs on residual feed intake (between weaning and day 126 post weaning) on total bacterial number ( $\log_{10}$  copies/ng total DNA) in faecal and intestinal samples**

| Time point        | High RFI | Medium RFI | Low RFI | S.E.M <sup>1</sup> | P    |
|-------------------|----------|------------|---------|--------------------|------|
| Faeces weaning    | 5.82     | 5.81       | 5.81    | 0.062              | 0.99 |
| Faeces day 42 pw  | 6.22     | 6.18       | 6.19    | 0.066              | 0.91 |
| Faeces day 138 pw | 6.14     | 6.23       | 6.18    | 0.061              | 0.67 |
| Ileal digesta     | 5.06     | 5.14       | 5.27    | 0.158              | 0.66 |
| Caecal digesta    | 5.99     | 5.79       | 5.75    | 0.163              | 0.18 |

Low RFI: faeces (n=36), digesta (caecal n=12, ileal n=9); medium RFI: faeces (n=30), digesta (caecal n=10, ileal n=9); high RFI: faeces (n=30), digesta (caecal n=8, ileal n=6).

<sup>1</sup>Least square means and pooled standard error of means are presented.

A,B,C Within each row, values that do not share a common superscript tend to be different (P≤0.10).

**Supplementary Table S5. Relative abundance of OTUs statistically different<sup>1</sup> among RFI ranks**

| Sample type                   | OTU Taxonomy   | Median relative abundance [confidence interval] <sup>2</sup> |                              |                              | P-value <sup>3</sup> |                |               |

<sup>1</sup> Statistical significance at P≤0.05.

<sup>2</sup>The values presented are not percentages; differentially abundant OTUs for which median relative abundance was less than 0.00001 are not presented.

<sup>3</sup>P-values in bold correspond to statistical differences between high and low RFI pigs.

<sup>4</sup>pw: post-weaning.

**Table S6. Effect of ranking pigs on residual feed intake (between weaning and day 126 post weaning) on pH and volatile fatty acid (VFA) concentrations ( $\mu\text{mol/g}$ ) in faeces at weaning, day 42 and day 138 post weaning**
