

S5 Fig. Dependence of particle deposition on centrifugation speed and microgel concentration.

AFM height retraces in air 10 mol-% PEG-DA cross-linked microgels pOEGMA_{80/10} deposited at 20 °C and different centrifugation speeds on amine-functionalized glass cover slips. From left to right: 500, 1000, 2000, and 3700 rpm (a). AFM height retraces of 10 mol-% PEG-DA cross-linked particles pOEGMA_{80/10} deposited from suspensions differing in the microgel concentration. From left to right: 0.001, 0.01, 0.1, and 0.25 mg/mL (b).
