

**Figure S3. Production of hydrolytic enzymes by *M. phaseolina* strains.**

- (A) Protease production on skim milk agar by *M. phaseolina* strain 1160. The zone was detected by observing transparent area appeared after degradation of casein.**
- (B) Lipase production on rhodamine B agar by *M. phaseolina* strain PCMC-F1. The production zone was observed on the basis of yellow-orange colour appeared under UV light.**
- (C) Amylase production on soluble starch by *M. phaseolina* strain 1156. The production zone was detected by spreading 1% lugol solution on the plate.**
