Supplementary Figure S1. PCoA plot for QIIME identified OTUs in saliva extracted DNA.

Supplementary Figure S2. Receiver operating characteristic (ROC) curve with the true positive rate (sensitivity) against the false positive rate (specificity) for *S. mutans* detection by Illumina MiSeq versus PCR in saliva is plotted. The sensitivity for saliva and tooth biofilm were 0.98 and 0.90, respectively. The area under the curve was 0.94 for saliva and 0,74 for tooth biofilm.
