

Figure S6. KCH and KCH^{+/-} mice exhibit significant duct-like lesions. (A) Immunofluorescent staining of nuclei (blue) and CK19 (red) from indicated mice at six weeks of age (n=5 mice/genotype, **p < 0.01, ***p < 0.001, data are expressed as means ± s.e.m, unpaired t-test). (B) Mucin associated with ductal cells stained with Alcian blue in pancreata from indicated mice at six weeks of age (n=5 mice/genotype, ***p < 0.001, data are expressed as means ± s.e.m, unpaired t-test).
