

**Figure S7. KCH and KCH<sup>+/-</sup> mice exhibit a significant stromal response.** (A) Immunofluorescent staining of nuclei (blue) and vimentin (red) from indicated mice at six weeks of age (n=5 mice/genotype, \*\*\*p < 0.001, data are expressed as means ± s.e.m, unpaired t-test). (B) Masson's trichrome staining in pancreata from indicated mice at six weeks of age (n=5 mice/genotype, \*\*\*p < 0.001, data are expressed as means ± s.e.m, unpaired t-test).
