

Tg(Flk1:eGFP), *HuC:tdT*

Supplementary Information, Figure S7. No overlapping between *HuC*-driven tdTomato expression in neurons and *Flk1*-driven eGFP expression in ECs. The *HuC:tdT* plasmid was transiently expressed in Tg(*Flk1:eGFP*) embryos. Representative single slice images at different optical sections showing intensive expression of tdTomato in neuronal somata and fibers, but not in any of eGFP-expressing endothelial cells. Scale bar, 50 μm (top) and 10 μm (bottom).
