

Supplementary Figure S2, Meister et al.

Supplementary Figure S2: Enlarged late endosomes in flotillin-1 ablated cells.

(a-b) Larger images of the EM micrographs shown in Fig. 4a. (c) Control or (d) flotillin-1 knockdown HeLa cells were immunostained for LAMP3 and imaged by 3-dimensional ground-state depletion microscopy with optical z sections. Color coding shows the position of the respective structure in a 3D-overlay of the sections.
