

Figure S4 *Symbiodinium* cell size in corals. *Symbiodinium* cells were isolated from *C. serailia* polyps infected by different *Symbiodinium* strains. (a) *Symbiodinium* cells isolated. (b) Average cell size in diameter. Numbers below the *Symbiodinium* cell size group show the average cell diameter (μ m) for all strains in that group. Different symbols (*, §, and #) indicate significant difference ($P < 0.01$) between groups. Error bars, \pm standard error ($n = 10$).
