

Figure S2

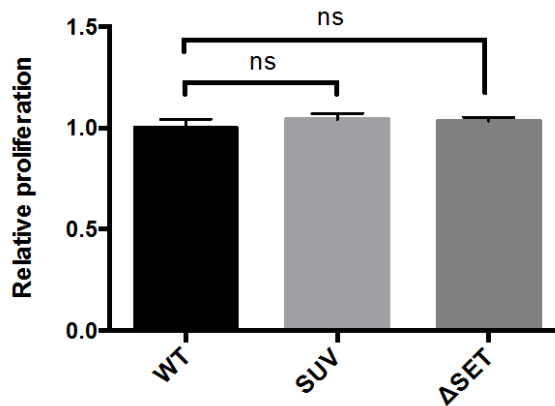

Figure S2. Cell proliferation of C4-2B WT, SUV39H1 and SUV39H1 Δ SET over-expressing cells. Cells were plated in triplicate in 48-well plates (2×10^4 cells/well). After 72 h, cells were stained with crystal violet followed by OD measurement. Relative proliferation was calculated with the OD values normalized to control WT cells. Data shown are mean \pm SEM ($n \geq 3$). ns, no significant.
