

S11 Table. Dry weights of *M. sativa* and *P. arundinacea* D seedlings at planting into the experiment.

	<i>M. sativa</i>	<i>P. arundinacea</i>
inoculated	29.4 (5.9)	10.6 (4.1)
not inoculated	38.7 (7.4)	20.8 (6.5)

The seedlings were either inoculated at germination with *R. irregularis* ‘Chomutov’ (for the pre-inoculation treatment) or left without inoculation (for the non-inoculated and in-situ inoculated experimental treatments). The total dry weights of plants are given in mg, values are means of five replicates (SD).
