

**S5 Fig. Hypocotyl length of 35S:YUC9 transgenic seedlings grown in light.**

Seeds were germinated and grown for 9 days on vertical MS medium in LD conditions. Hypocotyl lengths ( $n > 30$  in each genotype) were measured using Image J applications (<http://rsb.info.nih.gov/ij/>). Biological triplicates were averaged and statistically analyzed by two-tailed Student's *t*-test assuming unequal variance ( $*P < 0.05$ ). Bars indicate standard error of the mean. Scale bar, 1 mm.
