

**S1 Fig. Quantitative analysis of Lp(a) internalization.** Western blot analysis was performed on a series of samples representing different quantities of purified Lp(a) as well as a lysate of HepG2 cells exposed to 10  $\mu\text{g}/\text{mL}$  Lp(a) for 4 hours. The grey lines represent the interpolated quantity of Lp(a) from the density of the Lp(a) lysate band.
