Supplementary Fig. 1 Three conserved motifs of deduced RNA-dependent RNA polymerase (RdRp) from *Colletotrichum camelliae* filamentous virus 1 (CcFV-1) and other RNA viruses or organisms corresponding to motifs IV, V, and VI, respectively, as revealed by BLASTp. The “#” symbol refers to residues S or T, and “&” denotes any bulky hydrophobic residue (L, I, V, M, F, Y, W). Numbers within the brackets indicate the number of amino acids not shown. Virus names and acronyms are listed as follows: RHDV (*Rabbit hemorrhagic disease virus*), HCV (*Hepatitis C virus*), BVDV (*Bovine viral diarrhea virus*), RCNMV (*Red clover necrotic mosaic virus*), FCVC6 (*Feline calicivirus* strain CFI/68 FIV), *B. cinicola* (*Bryopsis cinicola*), SPMMV (*Sweet potato mild mottle virus*), AEV (*Avian encephalomyelitis virus*), CtRLV (*Carrot red leaf luteovirus*-associated RNA), AfuTmV-1 (*Aspergillus fumigatus* tetramycoivirus-1), BdRV-1 (*Botryosphaeria dothidea* virus 1), BbPmV-1 (*Beauveria bassiana* polymycoivirus-1), BbPmV-2 (*Beauveria bassiana* polymycoivirus-2).

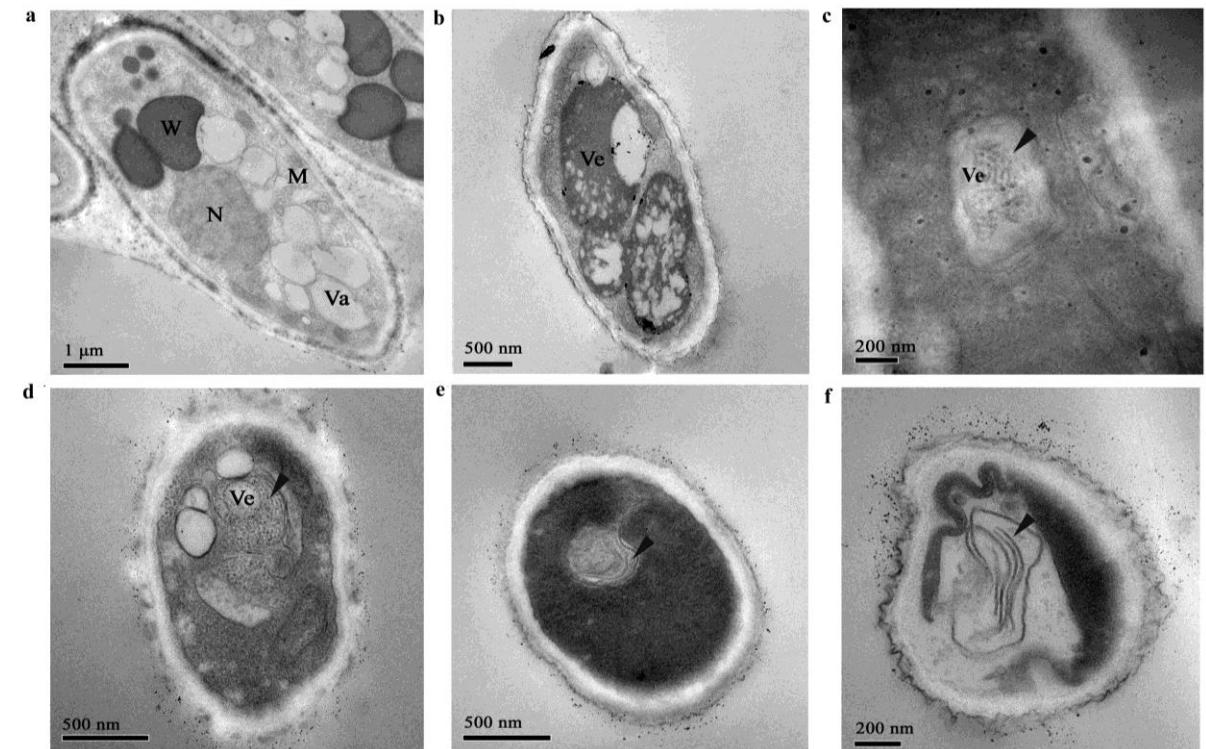

Supplementary Fig. 2 Phylogenetic analysis of the deduced RdRp sequences of CcFV-1 and selected members of all eight dsRNA virus families and unclassed dsRNA viruses belonging to group III and three (+)RNA virus families closer to CcFV-1, as listed in Supplementary Table 7. The phylogenetic trees were constructed as previously described¹.

Supplementary Fig. 3 Transmission electron microscopy (TEM) image of virus-like particles extracted from *C. camelliae* strain LT-3-1. (a) Representative virus-like particles with filamentous particles longer than 127.1 nm were observed in the crude extract. Scale bar, 1000 nm. (b) Virus-like particles of 4426.7 nm in length and 12.4 nm in width (no. 6 in Fig. 32) observed in the 30% sucrose fraction. Scale bar, 500 nm. (c) The longest filamentous particles purified after centrifugation in 1.45 g/cm₃ CsCl. Scale bar, 500 nm.

Supplementary Fig. 4 Immunosorbent electron microscopy (ISEM) images of virus-like particles decorated by PAb-P4 and a histogram of the sizes of decorating particles longer than 1000.0 nm. (a) The second longest virus-like particle in the crude extract decorated by PAb-P4 at an 8000-fold dilution observed by ISEM. Scale bar, 200 nm. (b) A histogram of the sizes of decorated particles longer than 1000.0 nm in the extracted LT-3-1 crude extract and in fractions corresponding to 30% and 20% sucrose, respectively, following sucrose gradient centrifugation. The numbers on the vertical axis indicate the numbers randomly assigned to virus-like particles.

Supplementary Fig. 5 TEM images of ultrathin hyphal sections of *C. camelliae* strains

LT-3-1 and LT-3-1D2. (a) Representative ultrathin hyphal section of strain LT-3-1D1 showing normal cellular structures. Scale bar, 1000 nm. (b) Representative ultrathin hyphal section of strain LT-3-1 showing degeneration. Scale bar, 500 nm. (c and d) Filamentous virus-like particles observed in the vesicles of strain LT-3-1 cells. The arrows indicate filamentous virus-like particles. Scale bars, 200 and 500 nm, respectively. (e and f) Unclear structures observed in the cytoplasm of hyphal cells of strain LT-3-1. Scale bars, 500 and 200 nm, respectively. N, nucleus; Va, vacuole; Ve, vesicle; M, mitochondrion; W, Woronin body.

Supplementary Table 1 Percent identity of the termini of dsRNAs 1 to 8.

	dsRNA1	dsRNA2	dsRNA4	dsRNA3	dsRNA5	dsRNA6	dsRNA8	dsRNA7
dsRNA1		76.5*	73.5	73.5	64.5	50	52.9	52.9
dsRNA2	33.7**		66.3	75.6	70.9	19.2	30.2	24.4
dsRNA4	21.1	24.3		63.4	68.8	26.7	37.8	32.6
dsRNA3	45.3	25	31.2		66.9	16.9	29.1	19.2
dsRNA5	31.7	25.4	23.8	47.6		19.1	36.4	23.3
dsRNA6	24.2	31.1	22.4	24	22.2		45.4	47.1
dsRNA8	28.4	19.4	24.4	28.1	30.2	22.1		47.7
dsRNA7	31.6	25.2	26.5	27.1	27	25.8	26.3	

* and **, percent identity of the 5- and 3-termini respectively.

Supplementary Table 2 Summary of the results of a BLASTp search for deduced proteins encoded by dsRNAs 1 to 8.

Note: The overall protein score is 692.					

Supplementary Table 7 Families and genera of filamentous viruses and dsRNA viruses listed according to the nature of the genome presented in the 9th International Committee on Taxonomy of Viruses (ICTV) ².

Family or unassigned genus	Nature of the genome	Morphology	Virion size (nm)	Genome configuration	Genome size (kbp or kb)	Host	Group
<i>Lipothrixviridae</i>	dsDNA	filamentous	24-38×410-2200	1 linear segment	16-42	Ar	I
<i>Inoviridae</i> ; inoviruse	ssDNA(+)	filamentous	7×700-3500	circular genome	5.8-12.4	B	II
<i>Ophioviridae</i>	ssRNA (-)	filamentous, coiled	3×≥760	3 or 4 linear segments	7.6-8.2, 1.6-1.8, 1.5, 1.4	P	V
<i>Tenuivirus</i>	ssRNA (+/-)	filamentous	3-10×>100	4-6 linear segments	total genome: 17-23	P, I	V
<i>Alphaflexiviridae</i>	ssRNA (+)	filamentous	10-15 × 470-800	1 linear segment	6-9	P,F	IV
<i>Betaflexiviridae</i>	ssRNA (+)	filamentous	10-15 × 600-1000	1 linear segment	6-9	P	IV
<i>Gammaflexiviridae</i>	ssRNA (+)	filamentous	13×720	1 linear segment	7	F	IV
<i>Closteroviridae</i>	ssRNA (+)	filamentous	12× 650-2000	1-3 linear segments	monopartite:13-19; bipartite: 8-9, tripartite: 8, 5.3, 3.9	P	IV
<i>Potyviridae</i>	ssRNA (+)	filamentous	monopartite:11-15 ×650-900; bipartite: 11-15 ×250-300 and 500-600	1 or 2 linear segments	monopartite: 9.3-10.8; bipartite: 7.3-7.6, 3.5-3.7	P	IV
<i>Birnaviridae</i>	dsRNA	icosahedral	65	2 linear segments	3.5, 3	V, I	III
<i>Chrysoviridae</i>	dsRNA	icosahedral	35-40	4 linear segments	3.6, 3.2, 3.0, 2.9	F	III
<i>Cystoviridae</i>	dsRNA	spherical	85	3 linear segments	6.4-7.1, 3.6-4.7, 2.6-3.2	B	III
<i>Endornaviridae</i>	dsRNA	pleomorphic RNA-containing vesicles	no virions; viral RNA contained in cytoplasmic vesicles	1 linear segment	14-18	P, F, O	III
<i>Partitiviridae</i>	dsRNA	icosahedral	30-43	2 linear segments	1.4-2.4 per segment	P, F	III
<i>Picobirnaviridae</i>	dsRNA	icosahedral	33-37	2 linear segments	2.4-2.6, 1.5-1.9	V	III
<i>Reoviridae</i>	dsRNA	turreted or non-turreted icosahedral capsid	60-85	9-12 linear segments	total genome: 19-32	F, I, P, V, Pr	III
<i>Totiviridae</i>	dsRNA	icosahedral	33-40	1 linear segment	4-7	F, Pr	III

Abbreviations of the virus hosts: Algae, Al; Archaea, Ar; Bacteria, B; Fungi, F; Invertebrates, I; Plants, P; Protozoa, Pr; Vertebrates. V: Oomycete. O.
