

FIG S2. LPS-induced IL-6 production and Ad-induced GFP expression are independent of cGAS. (A) MPI cells were transduced with cGAS or control shRNA and stimulated with 100 ng/ml LPS. IL-6 was analyzed in cell free supernatants 16 h after stimulation. (B) GFP expression in MPI cells infected with AdGFP for 16 h after shRNA mediated knockdown of cGAS (top: fluorescence; bottom: corresponding phase contrast, Scale bars indicate 100 μ m).
