

Supplemental table 5. Attendance rate of nationwide health screening program according to female by economic status in 2003–2004

Variable	Attendance in 2003 or 2004 screening		OR (95% CI)*	Adjusted OR† (95% CI)*
	Non-attendees (n=107,222)	Attendees (n=47,482)		
Economic status				
1 (Lowest)	15,332 (54.34)	8,854 (58.20)	1.53 (1.48–1.59)	1.56 (1.50–1.62)
2	16,076 (50.83)	7,520 (53.45)	1.24 (1.20–1.29)	1.25 (1.20–1.30)
3	19,314 (50.58)	7,270 (44.97)	1	1
4	23,998 (52.71)	9,078 (40.69)	1.00 (0.97–1.04)	1.01 (0.97–1.05)
5 (Highest)	32,502 (55.98)	14,760 (40.08)	1.20 (1.17–1.25)	1.21 (1.17–1.25)

Values are presented as number (%).

OR, odds ratio; CI, confidence interval.

*By logistic regression for categorical variable. †Adjusted for age, Charlson comorbidity index, and disability.
