

**Supplemental table 6.** The outpatient clinic visit rate of males after attending the health screening program and diagnosed with diabetes mellitus, hypertension and dyslipidemia according to economic status

Variable	No.	Economic status					P-value*
		1 (Lowest)	2	3	4	5 (Highest)	
<b>Diabetes mellitus</b>							
Diagnosed	3,523	564 (8.88)	516 (7.89)	635 (7.14)	798 (6.04)	1,010 (4.58)	<0.001
Outpatient visit	1,355	207 (36.70)	194 (37.60)	226 (35.59)	304 (38.10)	424 (41.98)	<0.077
<b>Hypertension</b>							
Diagnosed	19,016	2,556 (40.19)	2,467 (37.66)	3,128 (35.16)	4,395 (33.22)	6,470 (29.32)	<0.001
Outpatient visit	5,475	816 (31.92)	751 (30.44)	805 (25.74)	1,216 (27.67)	1,887 (29.17)	<0.001
<b>Dyslipidemia</b>							
Diagnosed	6,707	836 (13.17)	752 (11.50)	1,016 (11.43)	1,537 (11.64)	2,566 (11.64)	<0.007
Outpatient visit	1,227	131 (15.67)	119 (15.82)	161 (15.85)	291 (18.93)	525 (20.46)	<0.001

Values are presented as number (%).

\*By chi-square test for categorical variable.
