**S2 Fig. Inclusion Criteria for Analyses in the Strong Heart Study Family Study Participants Without Diabetes (Visit 3 pilot/Visit 4 Baseline)**

SHS, Strong Heart Study; CVD, Cardiovascular disease; BMI, Body mass index; LDL, Low-density lipoprotein; eGFR, estimated glomerular filtration rate
* Analyses include 12 SHS communities with available data and permission to conduct the study.

SHS Visit 3 pilot/4 baseline, N=2919 *

Urine arsenic and creatinine not measured, N=971
- Diabetes at baseline
- Not examined at follow-up (Visit 5)
- Insufficient stored urine

N=1948

Missing key CVD risk factors at baseline (smoking, alcohol drinking, BMI, LDL cholesterol, diabetes, hypertension, or eGFR) or family ID, N=31

N=1917

Missing plasma fibrinogen or PAI-1, N=16

Missing plasma CRP (Visit 4 only), N=120

Final N=1901 for analysis of urine arsenic and fibrinogen & PAI-1

Final N=1791 for analysis of urine arsenic and CRP
