Abdu et al	80/293 (27.3%) had in-situ fusion. 213/293 (72.7%) had instrumentation with pedicle screws	Pedicle screw + interbody	Change of more than 10° of angulation or more than 4mm of translation of the vertebrae between flexion and extension.  3/80 (3.75%) of PLF group was unstable. 4/63 (6.3%) of PLIF/TLIF group was unstable.
