

S1 Fig. The comparison of the effects of 4'-HW and wogonin on LPS-induced production level of NO in RAW 264.7 macrophages. Cells were treated with 4'-HW or wogonin for 1h prior to the addition of LPS (100 ng/mL) for an 24 h incubation. NO levels were determined with Griess reagent. The data shown represent the mean \pm SD of three independent experiments. # $p < 0.05$ vs the control group; * $p < 0.05$ vs the LPS-treated group.
