## **SUPPLEMENTAL INFORMATION**

Table S1. Spearman's rank correlation matrix for measured water quality parameters

Table S2. Kendall's Tau correlation matrix for reported water quality problems

Table S3. Logistic regression model results stratified by season

Fig. S1. Boxplot comparison of water quality values by presence/absence of salty taste

Fig. S2. Boxplot comparison of water quality values by presence/absence of particles

Fig. S3. Boxplot comparison of water quality values by presence/absence of scent

Fig. S4. Boxplot comparison of water quality values by presence/absence of oily sheen

Fig. S5. Boxplot comparison of water quality values by presence/absence of food staining

Fig. S6. Map of geological formations and interpolated surfaces for iron and TDS

**Table S1.** Spearman's rank correlation matrix for measured water quality parameters. Correlation coefficients are shown in the top and p-values in bottom portions of the matrix. Statistically significant values ( $p < 0.05$ ) are bolded.

**Table S3.** Logistic regression models stratified by season

Complaint	WQ	Unit $\Delta$ (mg/L)	OR (CI <sub>95%</sub> )	p-value	R <sup>2</sup>
<b>Dry season</b>					
Salty taste	TDS	100	2.53 (1.64, 3.89)	<0.001	0.29
Scent	Iron	1.00	4.93 (2.03, 11.9)	<0.001	0.19
Oily sheen	Iron	1.00	9.39 (3.21, 27.4)	<0.001	0.33
Food staining	Iron	1.00	4.25 (1.98, 9.12)	<0.001	0.21
<b>Rainy season</b>					
Salty taste	TDS	100	1.68 (1.35, 2.10)	<0.001	0.12
Scent	Iron	1.00	2.47 (1.63, 3.73)	<0.001	0.09
Oily sheen	Iron	1.00	24.7 (8.06, 75.5)	<0.001	0.33
Food staining	Iron	1.00	5.91 (3.21, 10.9)	<0.001	0.23

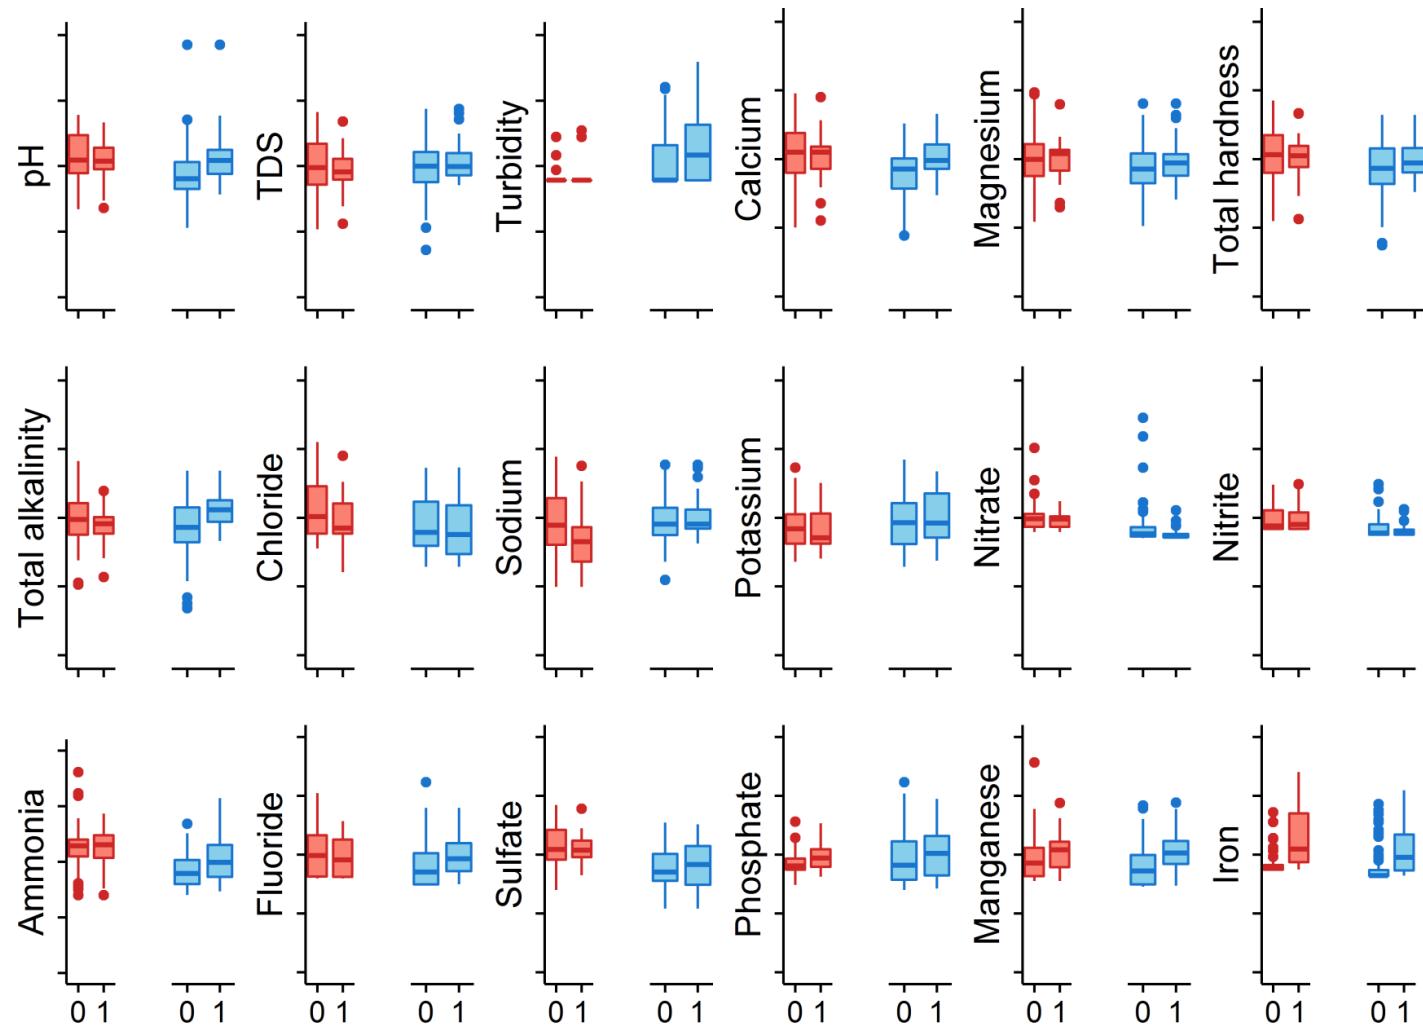

**Fig. S1.** Boxplots comparing the distribution of water quality values (y-axis) by presence or absence of the salty taste complaint (x-axis) in the dry (red) and rainy (blue) season samples.

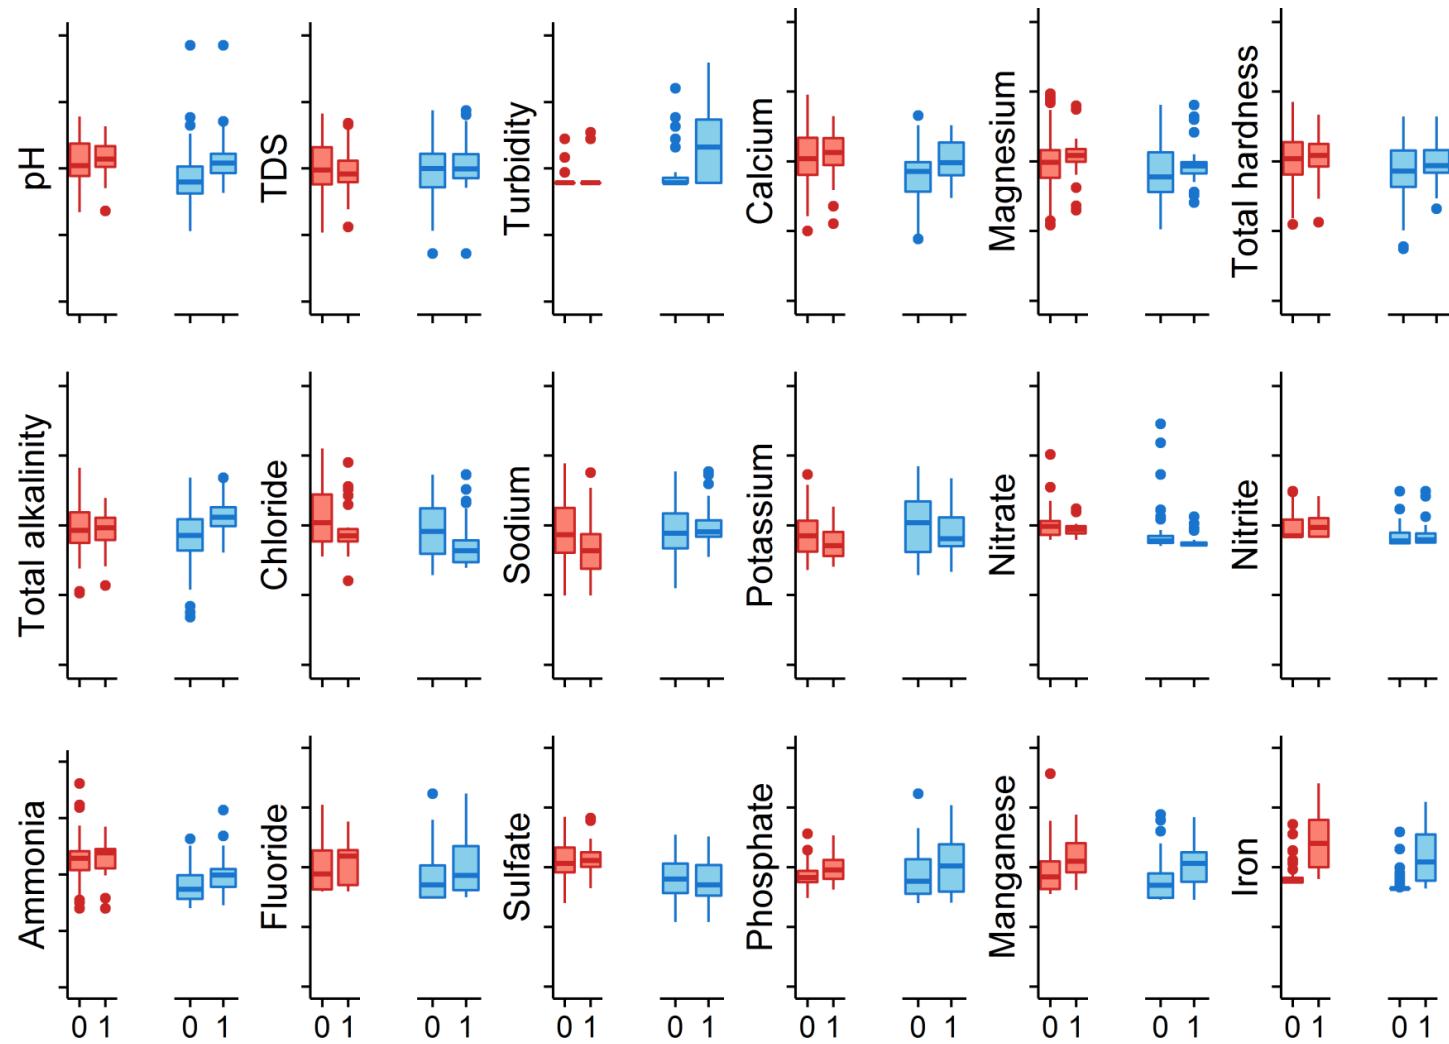

**Fig. S2.** Boxplots comparing the distribution of water quality values (y-axis) by presence or absence of the particles complaint (x-axis) in the dry (red) and rainy (blue) season samples.

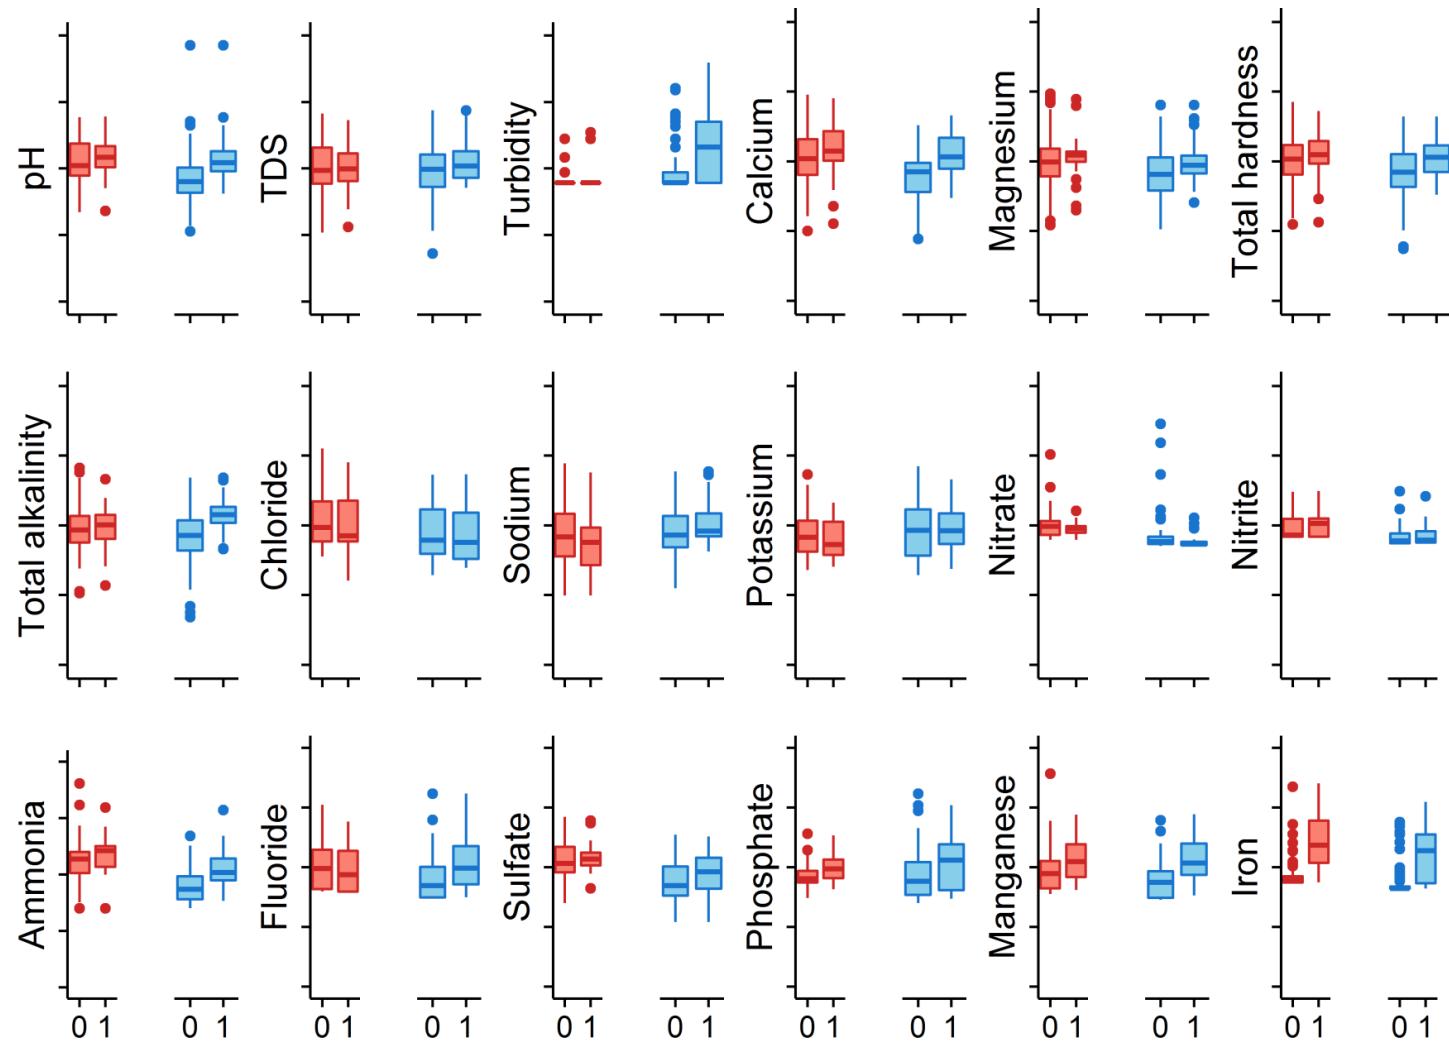

**Fig. S3.** Boxplots comparing the distribution of water quality values (y-axis) by presence or absence of the scent complaint (x-axis) in the dry (red) and rainy (blue) season samples.

**Fig. S4.** Boxplots comparing the distribution of water quality values (y-axis) by presence or absence of the oily sheen complaint (x-axis) in the dry (red) and rainy (blue) season samples.

**Fig. S5.** Boxplots comparing the distribution of water quality values (y-axis) by presence or absence of the food staining complaint (x-axis) in the dry (red) and rainy (blue) season samples.

**Fig. S6.** Map of geological formations (A) and interpolated surfaces for iron (B) and TDS (C); map of Ghana is shown in the bottom right corner with the insets specified. Geological formations were digitized from maps in Schluter, 2008.
