

Figure E1. Distribution of Age at Asthma Diagnosis in ACCESS

Figure E2. Relationships of combined prenatal and postnatal stress with child PFT z-scores Effect estimates (differences) and 95% confidence intervals of PFT z-scores comparing each combination of prenatal–postnatal stress. High stress is indicated by a negative life events (NLEs) score ≥ 5 , and low stress is indicated by a negative life events score of < 5 . PFT z-scores adjusted for age, sex, height, and race. Models adjusted for maternal education and child's asthma diagnosis (yes/no).

Percent Diagnosed with Asthma
