

SUPPORTING INFORMATION

SUPPLEMENTAL FIGURES

Parsons et al., Supp Figure S1

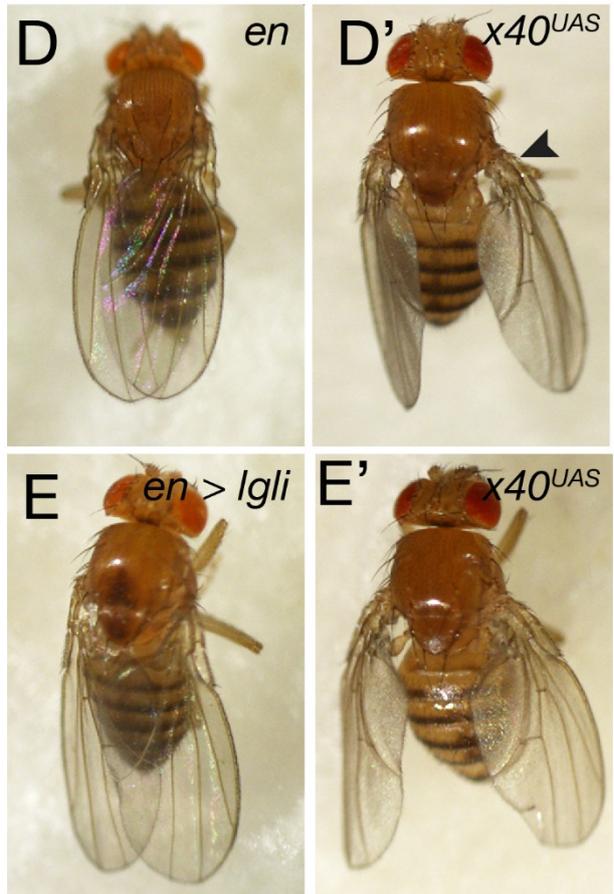

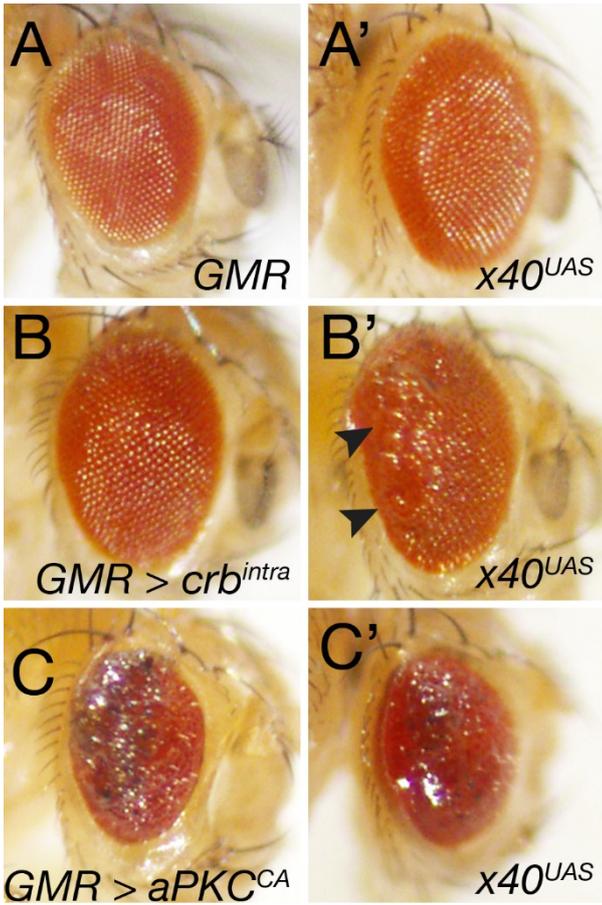

Figure S1. Validation of Lgl depletion

(A, A' and A'') Planar section of larval wing disc. Posterior is to the left. White scale bar represents 50 μ M.

(A) *en > GFP; Igli* wing disc posterior domain expression *en-GAL4* revealed by GFP+ tissue.

(A') Lgl staining shows reduced Lgl levels in posterior *en-GAL4* GFP+ tissue.

(A'') overlay of GFP+ tissue and Lgl staining confirms depletion of Lgl in posterior *en-GAL4* expression domain.

Parsons et al., Supp Figure S2

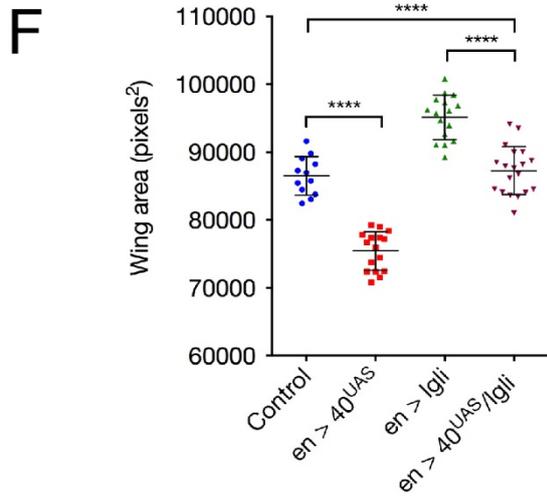

Figure S2. Cell polarity phenotype modification by ectopic *tio* expression

(A - C') Adult female eye images side views, posterior to the left.

(D-E') Adult female flies dorsal view.

(A) Control (*GMR - GAL4*) adult eyes displaying highly organized, regular, lattice like organization of ommatidia to form the adult retina which is unaffected by ectopic *tio* expression (A') 40^{UAS} (VDRC 60101).

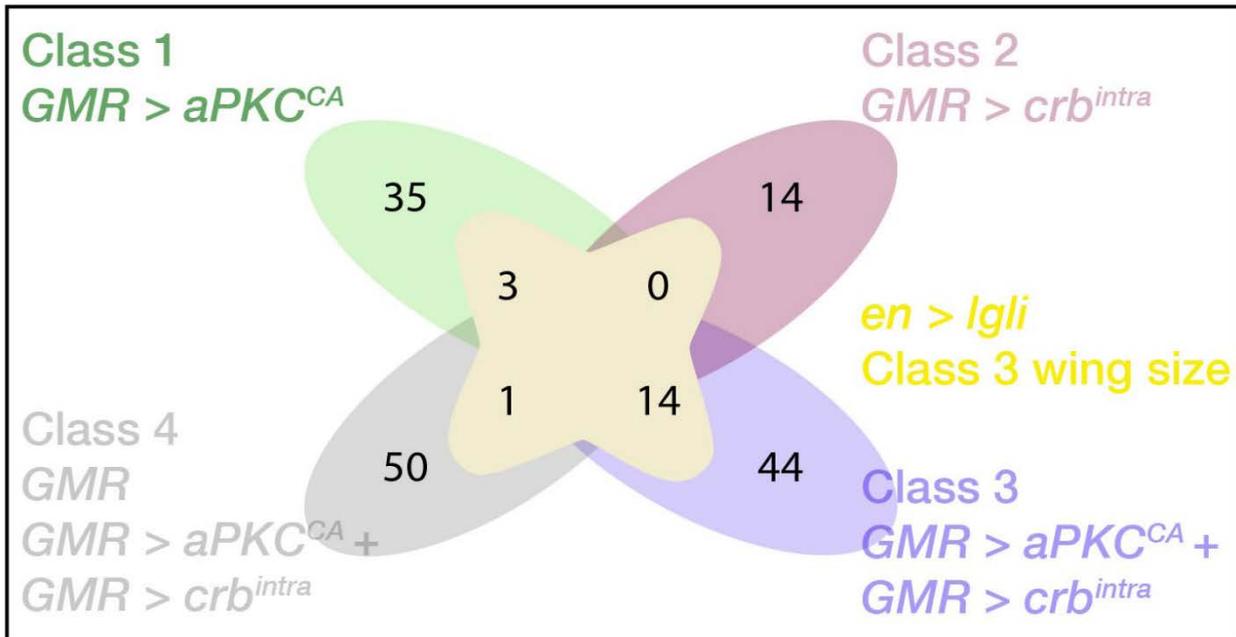

(B) *GMR > crb^{intra}* adult eyes are slightly larger and rougher than control eyes. (B') ectopic *tio* expression 40^{UAS} (VDRC 60101) enhances the *GMR > crb^{intra}* tissue overgrowth phenotype (arrowheads).

(C) *GMR > aPKC^{CA}* adult eyes are smaller, areas of the retina show disruptions in retinal architecture and necrosis which is unaffected by ectopic *tio* expression (C') 40^{UAS} .

(D) Adult female *en - GAL4*, note wings are held straight back in line with the anterior/posterior axis. (D') Ectopic expression of *tio* (40^{UAS}) results in malformation of the hinge region (arrowhead), consequently the wings are held out and smaller.

(E) Adult female *en > lgli*, note wings are larger than control. (E') Ectopic expression of *tio* (40^{UAS}) results in malformation of the hinge region (arrowhead), consequently the wings are held out and smaller than *en > lgli*.

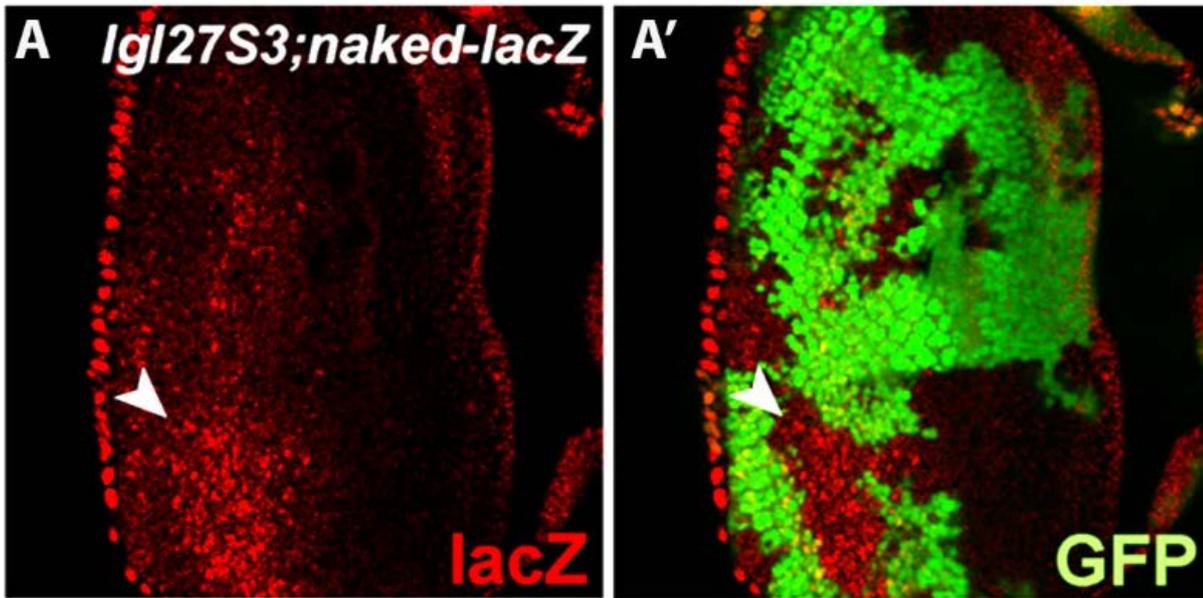

(F) Quantification of total wing area (D - E'). Results represent individual wings \pm SD. ****p < 0.0001.

Parsons et al. Supp Figure S3

Figure S3. Intersection of interacting genes from the $en > lgli$ wing size Classes 3.1, 3.3 and 3.4 with modifiers from the $GMR > aPKC^{CA}$ and $GMR > crb^{intra}$

Venn diagram depicting the number of modifier genes that interacted with the $en > lgli$ wing size Class Classes 1 - 3 from the adult *Drosophila* cell polarity eye screen. Yellow shading denotes $en > lgli$ modifiers, that showed greater modification than with $en-GAL4$. Green shading denotes Class 1, $GMR > aPKC^{CA}$. Pink shading denotes Class 2, $GMR > crb^{intra}$. Central region denotes Class 3.1, 3.3 and 3.4 genes that modified $GMR > crb^{intra}$, $GMR > aPKC^{CA}$, $GMR > crb^{intra}$ and $GMR > aPKC^{CA}$ or all three eye phenotypes.

Parsons et al., Supp Figure S4

Figure S4 Wnt signalling is upregulated in *lgl* mutant tissue

(A and A') Planar section larval eye disc. Posterior is to the left. Nkd-lacZ is normally expressed in a gradient from the posterior to the anterior of the larval eye disc (Tyler and Baker, 2007). White arrowhead denotes *lgl*^{-/-} mutant tissue with increased Nkd-β-galactosidase staining.

(A) *eyFLP; lgl^{27S3}, FRT40/Ubi-GFP, FRT40; nkd-lacZ/+*. GFP⁺ tissue is *wildtype*, GFP⁻ is *lgl*^{-/-} mutant tissue. β-gal staining reveals higher levels of *nkd-lacZ* reporter gene expression in *lgl*^{-/-} tissue compared to *wildtype*.

(A') Overlay of GFP⁺ tissue and β-gal staining confirms *lgl*^{-/-} mutant tissue has higher levels of Wnt signalling than *wildtype* tissue.

SUPPLEMENTAL TABLES

Table S1. Classification of kinases and associated factors assayed in ^{SEP}*Drosophila* adult eye cell polarity modifier screens

Tyrosine Kinase Like
STE (Homologs of yeast STE7, STE11 and STE20 genes)
Casein Kinase I
Protein Kinase Like
CMGC (Named after a set of families (CDK, MAPK, GS3K and CLK)
AGC (Named after Protein Kinase A, G and C families)
Tyrosine Kinase
Receptor Guanylate Cyclase
Calcium and Calmodulin regulated Kinase
Atypical
Other
Unclassified (Diverse group of kinases and candidate kinases)
Kinase associated (Co factors such as cyclins)
Non protein Kinase (Lipid and sugar kinases)

Kinases and kinase-associated factors assayed in *Drosophila* adult eye cell polarity modifier screens (sorted by CG number) encoding either kinases or associated factors for which *UAS*-controlled inverted repeat strains were tested. Kinase group and family are indicated (see color-coded chart below), as well as human orthologs. RNAi line refers to VDRC number and those numbers denoted with R were obtained from NIG (see *Drosophila* stocks, Materials and Methods for further information).

Table S2. Classification of phosphatases and phosphatase-associated factors assayed in ^{SEP}*Drosophila* adult eye cell polarity modifier screens

Phosphoprotein Phosphatase (PPP)
Protein Phosphatase Mg ⁺ /Mn ⁺ dependent (PPM)
Classical Protein Tyrosine Phosphatase
Class I/Dual Specificity Phosphatase (DSP)
Class III protein Tyrosine Phosphatase
Factor IIF interacting CTD Phosphatase/Small CTD phosphatase
Haloacid Dehalogenase like Hydrolase
Unclassified
Phosphatase associated (Co factors such as subunits of multi component PPtases)
Non protein phosphatase (Lipid or sugar phosphatases)

Phosphatases and phosphatase-associated factors assayed in *Drosophila* adult eye cell polarity modifier screens (sorted by CG number) encoding either phosphatases or associated factors for which *UAS*-controlled inverted repeat strains were tested. Phosphatase group and family is indicated (see color-coded chart). PTP and STP refer to Protein Tyrosine or Serine/Threonine Phosphatases respectively, as well as human orthologs. RNAi line refers to VDRC number and those numbers denoted with R were obtained from NIG (see *Drosophila* stocks, Materials and Methods for further information).

i * NIG numbers end in R, NE no effect

* Modifier genes classified based on strongest RNAi line phenotype

Results and brief description of adult female eye phenotypes observed for the 185 genes that modified $GMR > crb^{intra}$ and/or $GMR > aPKC^{CA}$. A variety of $GMR > crb^{intra}$ and/or $GMR > aPKC^{CA}$ modified phenotypes were observed including; increased or decreased necrosis, increased growth scored as ‘bulginess’ or ‘folding’, decreased growth described as ‘narrowness’ or small and depigmented or glassy eyes. Gene lists organized by Class. Genes ordered in accordance to CG number, highest to lowest. All interactions are at 25°C unless stated otherwise.

Table S4 Gene list of *en* > *lgli* modifiers

Results and brief description of adult female wing phenotypes observed for the 93 genes that modified *en > Igli*. Genes highlighted in blue or yellow were identified as kinases or phosphatase regulators of Wnt signalling respectively (Swarup et al., 2015). Gene lists organized by Class. Genes ordered in accordance to CG number, highest to lowest. RNAi line refers to VDRC number and those numbers denoted with R were obtained from NIG (see *Drosophila* stocks, Materials and Methods for further information). All interactions are at 25°C unless stated otherwise.

Table S5. Gene lists of overlapping modifier genes from Classes 1 - 4 (adult eye cell polarity screen) and *en > Igli* wing screenModifiers only in *GMR > aPKC^{CA}* (Class 1 eye screen)

Table S6. *en* > *lgli* Group 3 Wing Size Subclasses

Group 3 Wing size Subclasses	Gene
Subclass 3.1: <i>en</i> > <i>lgli</i> only modifier	<i>Btk29A</i> , <i>PP2C</i> , <i>CG9784</i> , <i>Ror</i> , <i>dco</i> , <i>CAMK1B</i> , <i>Eip63E</i>
Subclass 3.2: <i>en-GAL4</i> and <i>en</i> > <i>lgli</i> modified equivalently	<i>fabI</i> , <i>Phkγ</i> , <i>nmo</i> , <i>CdKB</i> , <i>ald</i> , <i>NUAK</i> , <i>hppy</i> , <i>Pk34A</i> , <i>alph</i> , <i>*Sk2</i> , <i>*hop</i> , <i>*p11</i> , <i>*lic</i> , <i>*CG8866</i> , <i>*CG14212</i> , <i>*CG14903</i> , <i>*CG7378</i> , <i>*Wnk</i> , <i>*CG10417</i> , <i>*Dr1-2</i> , <i>*Nek2</i> , <i>*Sdr</i> , <i>*CG5565</i> , <i>*CG34357</i>
Subclass 3.3: <i>en</i> > <i>lgli</i> smaller than <i>en-GAL4</i> alone	<i>VRK</i> , <i>wdb</i> , <i>Pka-C1</i> , <i>PpV</i> , <i>PpY-55A</i> , <i>SIK2</i> , <i>Pp2cl</i> , <i>wun2</i> , <i>HIPK</i>
Subclass 3.4: increase in wing size <i>en</i> > <i>lgli</i> larger than <i>en-GAL4</i> alone	<i>SIK3</i> , <i>Tao-1</i>

Analysis of modifier genes that altered *en* > *lgli* wing size compared with *en* – *GAL4* revealed different subclasses. Subclass 1 modifier genes only affected *en* > *lgli* wing size. Subclass 2 modifier genes decreased wing size in both *en* - *GAL4* and *en* > *lgli* equivalently. Subclass 3 modifier genes that impacted *en* > *lgli* wing size to a greater extent than control *en* - *GAL4* wings. Subclass 4 modifier genes increased wing size. Gene lists organized by Class. Genes highlighted in blue or yellow were identified as kinases or phosphatase regulators of Wnt signalling, respectively (Swarup et al., 2015). * Indicate genes identified by KK lines, which may be false positive due to the modification of *tio* gene expression, although these were not interactors with *GMR*>*crb*. Ones highlighted in red text indicate genes identified by KK lines that also interact with *GMR*>*crb*, and are potential false positives due to their potential effect on *tio* gene expression.

Table S7. Lists of modifier genes of Wing Size Class 3 that modified *en > Igli*, greater than *en-GAL4* alone (Classes 3.1, 3.3, 3.4).

<i>en > Igli</i> Interactor	<i>GMR > aPKC</i>	<i>GMR > Crb</i>	<i>GMR > GAL4</i>	Gene Function in signalling pathways
Class 3.1				
<i>Btk29A</i>	+			Src
<i>PP2C</i>	+	+		Wingless
<i>CG9784 (IPP)</i> (Inositol phosphate phosphatase)	+	+		Lipid/PI3K
<i>Ror</i> (Receptor Tyrosine Kinase)	+			-
<i>dco</i>	+	+		Wingless, Hedgehog, Hippo, Ras
<i>CAMKIIIB (CG17698)</i>	+	+		-
<i>Eip63E</i> (Cyclin-dependent protein kinase)	+	+		Wingless, Ras
Class 3.3				
<i>VRK (CG8878)</i>	+	+		Wingless, Ras
<i>wdb (PP2A)</i>	+	+		Wingless, P13K
<i>Pka-C1</i>	+	+		Wingless, Ras, Hedgehog, Dpp
<i>PpV</i>	+	+	+	Wingless, Ras
<i>PpY-55A</i>	+			-
<i>SIK2</i>	+	+		Hippo
<i>Pp2c1</i>	+	+		Wingless
<i>wun2</i> (Lipid phosphate phosphatase)	+	+		Wingless, Lipid/PI3K
<i>HIPK</i>	+	+		Wingless, Notch, Hippo, Hedgehog, JNK
Class 3.4				
<i>SIK3</i>	+	+		Hippo
<i>Tao-1</i>	+	+		Hippo

Gene lists organized by Class. Genes highlighted in blue or yellow were identified as kinases or phosphatase regulators of Wnt signalling respectively (Swarup et al., 2015). Functions of genes in signalling pathways are listed, as revealed from Flybase records.
