

2,4,6-Trinitrotoluene Induces Apoptosis via ROS-Regulated Mitochondrial Dysfunction and Endoplasmic Reticulum Stress in HepG2 and Hep3B Cells

Hung-Yu Liao, Chih-Ming Kao, Chao-Ling Yao, Po-Wei Chiu, Chun-Chen Yao, and Ssu-Ching Chen

Supplemental Figure 1. ROS-dependent ER stress was involved in the TNT-mediated ROS production. (A) Hep3B cells were treated with 60 μ M TNT for 24 h in the presence or absence of 10 mM NAC, given the expression of ER stress-related proteins. The bands were excised from different gels that were run under the same electrophoresis condition.

Supplemental Figure 2. HepG2 cells were transfected with CHOP siRNA for 24h, and analysed by western blot; n = 3. The data were presented as mean \pm SD. The differences were significant at *P < 0.05, **P < 0.01.
