

SUPPLEMENTARY FIG. S13. Hepatic NAD⁺, the SirT1 cosubstrate, and NADH levels remained unchanged in *Glrx*^{-/-} mice. (A) Liver NAD⁺ levels and (B) NAD⁺/NADH ratio measured in liver homogenates. Samples were normalized to liver weight (means ± SEM, *N* = 3–4). The nonparametric Mann–Whitney *U* test was used to determine statistical significance.
