

SUPPLEMENTARY FIG. S8. Liver gene expression of thioredoxins and glutaredoxin 2 is unaltered in *Glrx*^{-/-} mice. Gene expression of glutaredoxin 2 (*Glrx2*) and the thioredoxin family including thioredoxin 1 (*Trx1*), thioredoxin 2 (*Trx2*), and thioredoxin interacting protein (*Txnip*) was measured by quantitative RT-PCR. Relative mRNA expression was standardized by β -actin and normalized to the control group (means \pm SEM, $N=5-8$). The nonparametric Mann-Whitney U test was used to determine statistical significance.
