

Supplementary Figure S7

XBP1 does not activate the *TRB3* promoter.

293 cells were transiently transfected with pTRB3-Lucs (A), p(ERSE)₂-Luc or p(UPRE)₂-Luc (B), with pCMV- β -gal and the expression vector for XBP1. After 48hr, the luciferase activity in cell lysates was measured and was normalized with β -galactosidase activity.
