

Supplementary Figure S8

NF-Y does not participate in the Tunicamycin activated *TRB3* promoter.

293 cells were transiently transfected with p(ERSE)2-Luc (A), or pTRB3-Luc6 (B), with pCMV- β -gal and the expression vectors for wild type (WT) or dominant negative (DN) form of NF-YA. After 48hr, cells were treated with 2 μ g/ml of tunicamycin for 16 hr. The luciferase activity in cell lysates was measured and normalized with β -galactosidase activity.
