

Supplemental Figure 1: Keratin gel porosity as determined by mercury intrusion porosimetry. Formulations connected by lines are significantly different ($P < 0.05$) as determined by ANOVA with Tukey's post-hoc test. Error bars represent standard deviation. $N = 3$ for 100:0, 70:30, and 50:50. $N = 2$ for 30:70 and 0:100.
