Supplementary Figure \$1. Effect of genetic deletion of MLCK on unmanipulated mice. No statistically significant differences were seen between WT and MLCK^{-/-} mice in gut epithelial apoptosis by (A) H&E (p=0.10) or (B) active caspase 3 (p=0.18), (C) crypt proliferation (p=0.19), (D) villus length (p=0.52), (E) lung MPO (p=0.20) or (F) BAL MPO (p=0.22). N = 7/group for all experiments.
