

Supplementary Fig. 3 The chloroquine (1 mM) induced transient rise in $[Ca^{2+}]_i$ (as revealed in **Fig. 6B**) in the presence of 600 nM OT is mediated by GNAT3. Data are mean \pm s.e.m., n= 11cells for each group, **P<0.01 WT vs GNAT3^{-/-} mice; unpaired Student's t-test.
