

Fig. S6. Gene expression in NR9456 cells. (A) *Trex1* and *Aim2* (B) target gene expression levels were measured by RT-qPCR using same cDNAs with Fig. 4A to examine the knockdown effects of siRNAs. Values were normalized to *Gapdh* and are shown as mean \pm SEM of three experiments in triplicate. (C) Expression levels of *Trex1* and *Aim2* were measured using same BMDC cDNAs as in Fig. 4B, to confirm the knockdown effects of the genes. * $P < 0.05$ and *** $P < 0.0005$ (two-tailed t-test)
