Supplementary data S4: miRDeep analysis of miR-34b sequencing data for MDA-MB-231 cells transfected with annotated miR-34b mimic.

The plot shows the percentage of reads for each individual base in the mature miRNA. The annotated sequences are given in red, and the identified sequences and their number of reads are listed below.

Cell line : MDA-MB-231 cells transfected with Negative control
miRBase precursor : hsa-mir-34b
Total read count : 25
hsa-miR-34b-3p read count : 6
hsa-miR-34b-5p read count : 19
remaining reads : 0

Supplementary data S5: miRDeep analysis of miR-34b and miR-34c sequencing data for MDA-MB-231 cells transfected with control mimic.

The plot shows the percentage of reads for each individual base in the mature miRNA. The annotated sequences are given in red, and the identified sequences and their number of reads are listed below.

Cell line : IOR-MOS
 miRBase precursor : hsa-mir-34b
 Total read count : 703
 hsa-miR-34b-3p read count : 100
 hsa-miR-34b-5p read count : 603
 remaining reads : 0

Supplementary data S6: miRDeep analysis of miR-34b sequencing data for IOR-MOS and differentiated NHOST cells.

The plot shows the percentage of reads for each individual base in the mature miRNA. The annotated sequences are given in red, and the identified sequences and their number of reads are listed below.

Supplementary data S7: Raw sequencing reads of mature miR-34b from both non-malignant and malignant cells.

Bars indicating the percentage of reads for the individual bases in the miR-34b gene sequence, obtained from raw sequencing data of MDA-MB-231 and noncancerous mesenchymal stromal cells (NHOST) before and after osteogenic differentiation, osteoblast primary culture (OB4), and liposarcoma (SA-4) and osteosarcoma cell lines (MHM, IOR-OS18, SAOS2, IOR-MOS). The annotated sequence is underscored. The numbers in brackets represent the number of total reads for each cell line.
