

Supplementary Figure S1 Flow cytometric analysis of the transfer potential of FITC-Dextran towards nRBCs.

5×10^7 nRBCs were cultured in medium containing 0.5 mg/ml FITC-Dextran for 24 and 72 h. The FITC-nRBCs were analyzed by flow cytometry at 24 and 72 h ($n=3$). Red lines and green lines indicate control nRBCs and FITC-nRBCs, respectively.
