*GEE using a proportional odds model for Group 1-2 based on 80 observations. I- orbital frontal cortex; II- mid-frontal, anterior cingulate, entorhinal and superior temporal cortices; III- motor, sensory, and angular cortices; IV- visual cortex. Regions III and IV are combined due to small number of observations in each region.

Table S2 Focused analyses of non-bvFTLD-TDP recapitulate spread of pathology and genetic differences.
