

**Supplemental Figure S5. Systemic Cic inactivation.**

(A) Western blot analysis of Cic expression in the indicated tissues obtained from a representative  $Cic^{lox/lox};hUBC-CreERT2^{+/T}$  mouse subjected to Tmx diet for 3 months. Two different exposures for Cic are shown. Akt expression levels served as a loading control.

(B) Relative expression levels of *Etv4* mRNA in the indicated tissues obtained from a representative  $Cic^{lox/lox};hUBC-CreERT2^{+/T}$  mouse subjected to Tmx diet for 3 months.  $\beta$ -*Actin* expression levels were used for normalization. Data represent mean  $\pm$  SD.
