

Supplemental Figure S6. Characterization of T-ALL induced by *Cic* inactivation.

(A) H&E staining of representative lung, liver and spleen sections of a *Cic*^{lox/lox};*hUBC-CreERT2*^{+T} mouse subjected to Tmx diet at humane endpoint. Scale bar represents 50 μm .

(B) H&E staining of representative liver and kidney sections obtained after transplantation of tumor cells from a *Cic*^{lox/lox};*hUBC-CreERT2*^{+T} mouse subjected to Tmx diet at humane endpoint into a immunodeficient mouse. Scale bar represents 50 μm .
