

Fractalkine/CX3CL1 induced intercellular adhesion molecule-1-dependent tumor metastasis through the CX3CR1/PI3K/Akt/NF- κ B pathway in human osteosarcoma

SUPPLEMENTARY FIGURE

Supplementary Figure S1: A-B. MG63 cells were pretreated with polymyxin B (poly B, 1 μ M) for 30 min followed by stimulation with fractalkine (10 ng/ml), the cell migration and ICAM-1 expression were examined by the Transwell migration assay and qPCR. **C.** MG63 cells were incubated with serial concentrations of AKTi (0-50 μ M) for 48h, and cell viability was examined using an MTT assay. Results are expressed as the mean \pm SEM of triplicate samples. *P < 0.05 compared with the control group.
