

Supplementary Figure S3

Cytotoxicity of nilotinib-cisplatin in ovarian cancer models. Influence of nilotinib (Nil; 1 or 10 μM; 15-min pre-incubation) on the uptake of cisplatin (Cis) (**A**) and NAC-1 (**B**), drug-induced cytotoxicity (**C**, **D**) in the replicating ovarian cancer cell lines IGROV-1 and SKOV-3. Data (n = 4-8 per group) represent mean (bars) and SD (error bars).
