

MicroRNA-107-5p suppresses non-small cell lung cancer by directly targeting oncogene epidermal growth factor receptor

SUPPLEMENTARY MATERIALS

Supplementary Figure 1: MiR-107-5p suppresses cell proliferation, cell cycle and promotes apoptosis in 95-D cell lines. (A) The expression of miR-107-5p was measured by qRT-PCR in 95-D cells 48 h after transfection with NC (negative control) or miR-107-5p mimic. (B) 95-D cells were transfected with NC or miR-107-5p mimic, and cell proliferation was determined by CCK-8. (C) Colony formation assay was performed in 95-D cells transfected with NC or miR-107-5p mimic. (D) Cell apoptosis situations of 95-D cells transfected with NC or miR-107-5p mimic were increased by flow cytometry. (E) The cell cycle distributions of 95-D cells transfected with NC or miR-107-5p mimic were detected by flow cytometry. All experiments were repeated in triplicate (*P < 0.05, ** P<0.01, *** P<0.001).

Supplementary Table 1: The clinical-pathological features of 61 cases NSCLC patients**See Supplementary File 1****Supplementary Table 2: PCR primers**

Primer name	Primer sequences(5'-3')
18S RNA(F)	AGGAATCCCAGTAAGTGCG
18S RNA(R)	GCCTCACTAACCATCCAA
