

SUPPLEMENTARY INFORMATION

Butyrate-producing bacteria supplemented *in vitro* to Crohn's disease patient microbiota increased butyrate production and enhanced intestinal epithelial barrier integrity

Supplementary Table 1 Concentration of Clostridial cluster IV and cluster XIVa in log copies/mL in lumen- and mucus-associated microbiota of five active CD (A) and five remissive CD (R) samples 65h after start incubation and treatment. Values are averages of technical replicates ($n=3$) ± standard deviation. Light grey boxes indicate a higher concentration in treated sample compared to non-treated control; dark grey boxes indicate a difference with control of at least 1 log unit.

Supplementary Table 2

Label	Gender	Age	Location of the disease	WBC feces	CRP blood (mg/L)	Medical therapy
A 1	F	36	Colonic	21.164	-	Immunosuppressive drug
A 2	F	57	Ileocolonic	-	-	Mesalamine
A 3	F	28	Ileocolonic	-	15,9	Immunosuppressive drug
A 4	F	13	Ileocolonic	115.506	30,8	Nutritional therapy, Immunosuppressive
A 5	M	14	Pancolitic	511.341	26,9	none
R 1	F	-	-	-	-	Anti-tumor necrosis factor alpha
R 2	M	20	-	4.503	-	Immunosuppressive drug; Mesalamine
R 3	F	26	Ileal	3.364	-	none
R 4	F	43	-	5.720	-	none
R 5	F	64	-	3.598	-	Immunosuppressive drug

Supplementary Table 2 Metadata of Crohn's disease patients used for fecal sample collection. WBC: White Blood Cell count in fecal suspension. CRP: C-Reactive Protein levels blood.

Supplementary table 3
