

Promoter DNA methylation analysis reveals a combined diagnosis of CpG-based biomarker for prostate cancer

SUPPLEMENTARY FIGURE AND TABLES

Supplementary Figure 1: The methylation levels of eight CpGs (cg06363129, cg08843517, cg03576469, cg05385513, cg07220448, cg11417025, cg20883831, and cg23824801) in 12 tumor samples and matched adjacent tissues from GSE74013.

Supplementary Table 1: The specific primers of methylated sites
