

S5 Figure. Cell cycle analysis by flow cytometry following mimosine treatment.

Left- Untreated Daudi cells (control). Following a 24 hr mimosine treatment, the cells were divided into two parts. One culture was grown in medium containing Mimosine for 4 hours (Center; Mimosine treated). The other culture was grown in normal growth media for the same length of time (Right; Mimosine removed). All the cells were collected, and stained with propidium iodide for flow cytometric analysis.
