Abstract: A bioassay guided investigation (cancer cell cytotoxicity) of a *Moorea producens* collection from Key West, Florida, led to the discovery of two new bioactive natural products [(+)-malyngamide Y and a cyclic depsipeptide, (+)-floridamide]. Their planar structures were deduced through extensive analysis of 1D and 2D NMR spectroscopic data and supported by HRFAB mass spectrometry. The new cyclic depsipeptide contains four amino acids units, including N-methyl phenylalanine (N-MePhe), proline (Pro), valine (Val) and alanine (Ala), beside the unique unit, 2,2-dimethyl-3-hydroxy-octanoic acid (Dhoaa). In addition to the discovery of these two new compounds, two previously reported metabolites were also isolated and identified from this cyanobacterial collection; (-)-C-12 lyngbic acid and the antibacterial agent (-)-malyngolide.

S1 ¹H NMR spectrum of compound **1** in CDCl₃

S2 COSY spectrum of compound **1** in CDCl₃

S3 TOCSY spectrum of compound **1** in CDCl₃

S4 ¹³C NMR spectrum of compound **1** in CDCl₃

S5 HSQC spectrum of compound **1** in CDCl₃

S6 HMBC spectrum of compound **1** in CDCl₃

S7 COSY spectrum of compound **2** in CDCl_3

S8 TOCSY spectrum of compound **2** in CDCl_3

S9 ^{13}C NMR spectrum of compound **2** in CDCl_3

S10 HSQC spectrum of compound **2** in CDCl_3

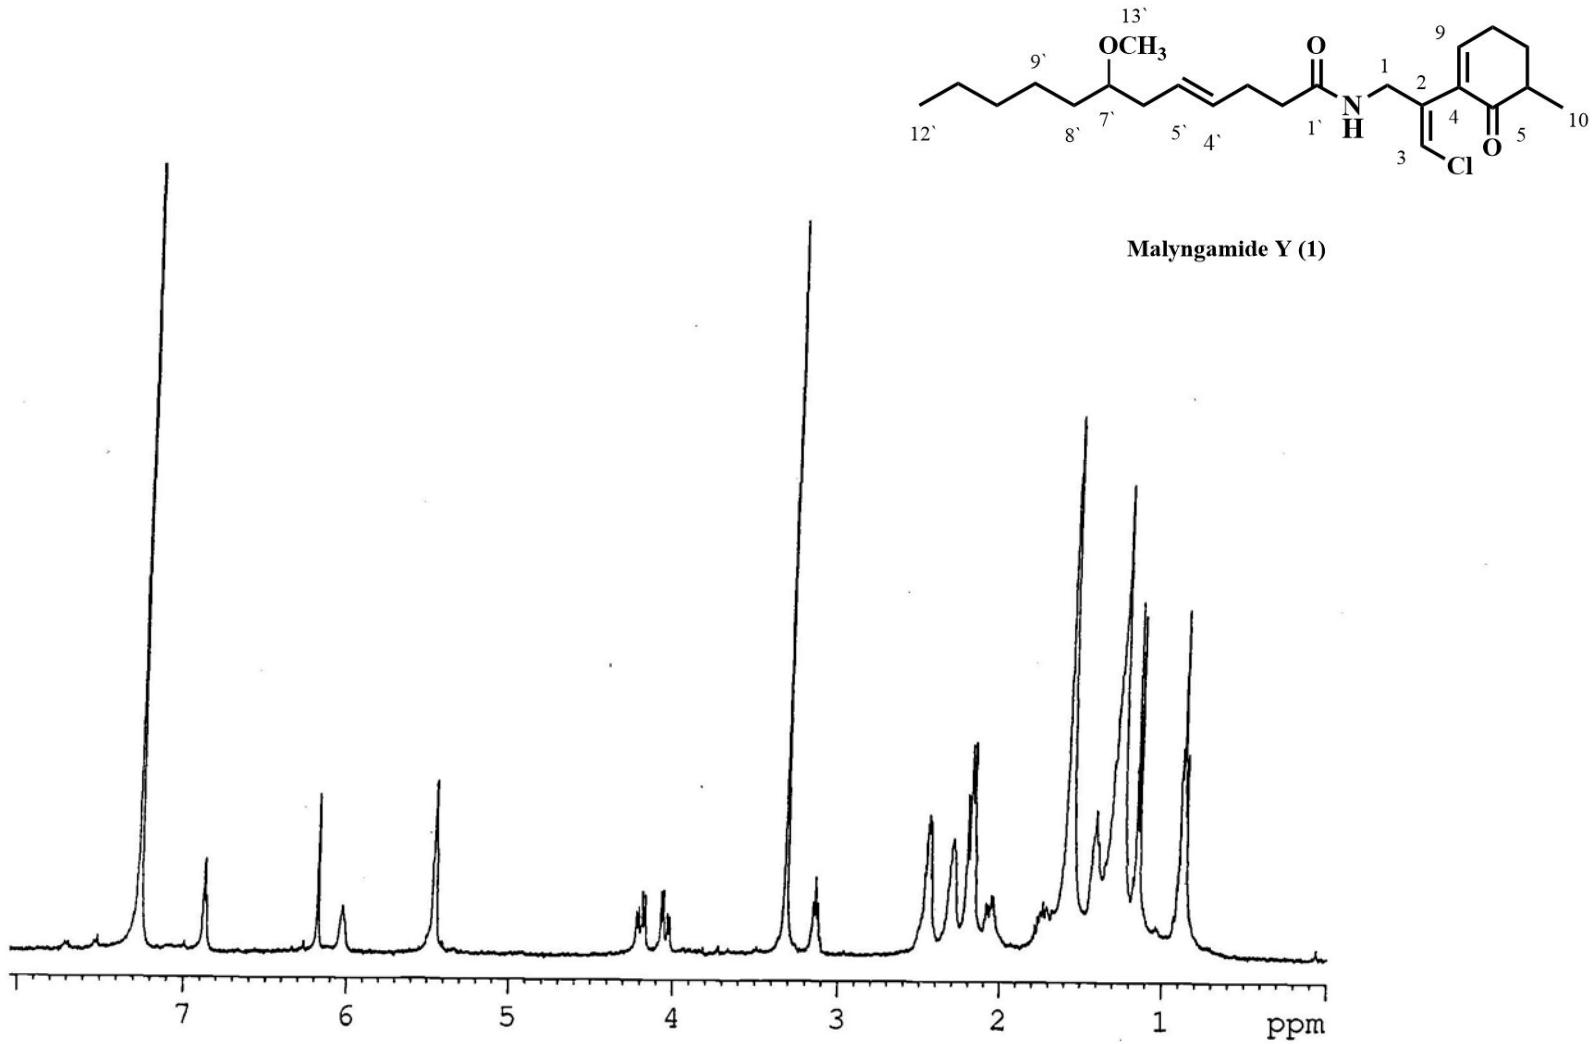

S11 CIMS fragmentation observed for Floridamide

S12 Partial structures of **2** connected by HMBC correlations

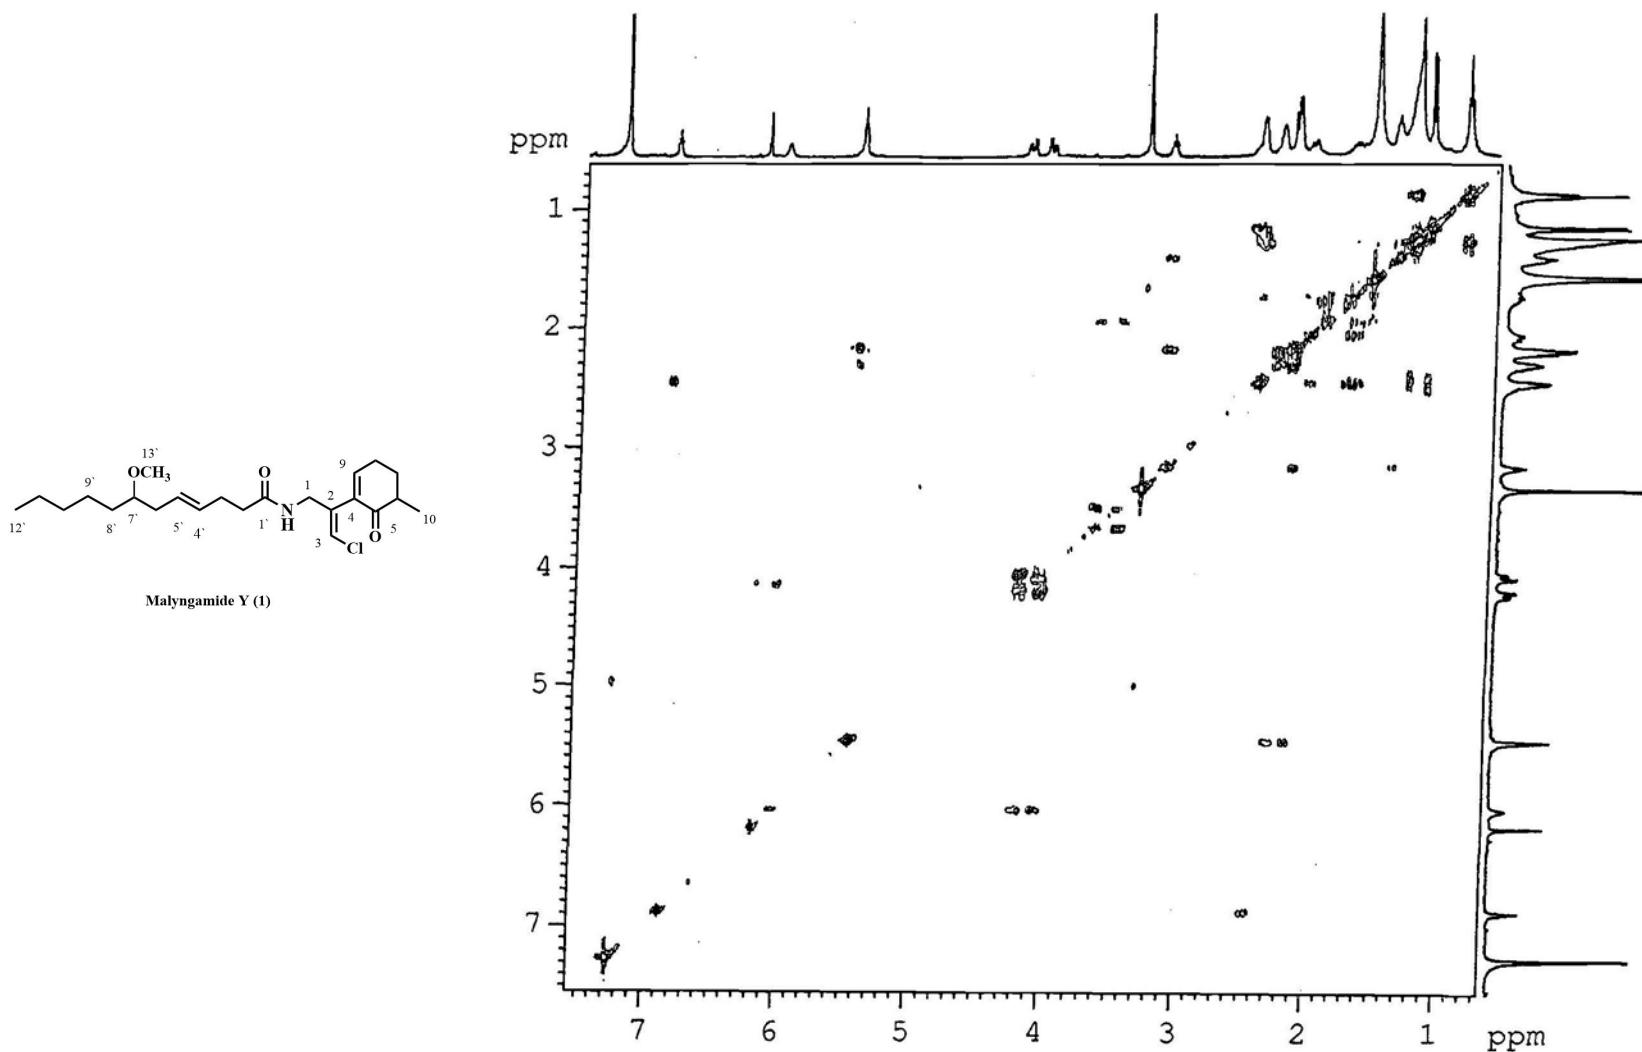

S13 Cytotoxic activity of malyngamide Y
