Data are presented as odds ratios (ORs) with their 95% confidence intervals (CIs) and associated p-values for both unadjusted and adjusted logistic regression models.

The baseline group consisted of children who had not been breastfed.

^a Adjusted for sex, ethnicity, Townsend deprivation index, family education, day care attendance, number of older siblings, pre- and post-natal maternal smoking, pet ownership (dog, cat, or bird), and parental atopy (defined as paternal or maternal history of asthma, hay fever, or eczema).
