Title and abstract				T .
Title	1	D;V	Identify the study as developing and/or validating a multivariable prediction model, the target population, and the outcome to be predicted.	p. 1
Abstract	2	D;V	Provide a summary of objectives, study design, setting, participants, sample size, predictors, outcome, statistical analysis, results, and conclusions.	pp. 3-4
Introduction				
Background and objectives	3a	D;V	Explain the medical context (including whether diagnostic or prognostic) and rationale for developing or validating the multivariable prediction model, including references to existing models.	pp. 5-6
	3b	D;V	Specify the objectives, including whether the study describes the development or validation of the model or both.	p. 6
Methods			Tallada of the mederal sound	
Source of data	4a	D;V	Describe the study design or source of data (e.g., randomized trial, cohort, or registry data), separately for the development and validation data sets, if applicable.	p. 7
	4b	D;V	Specify the key study dates, including start of accrual; end of accrual; and, if applicable, end of follow-up.	p. 7
Participants	5a	D;V	Specify key elements of the study setting (e.g., primary care, secondary care, general population) including number and location of centres.	pp. 7-8
	5b	D;V	Describe eligibility criteria for participants.	p. 8-9
	5c	D;V	Give details of treatments received, if relevant.	p. 7
Outcome	6a	D;V	Clearly define the outcome that is predicted by the prediction model, including how and when assessed.	p. 9
	6b	D;V	Report any actions to blind assessment of the outcome to be predicted.	p. 9
Predictors	7a	D;V	Clearly define all predictors used in developing or validating the multivariable prediction model, including how and when they were measured.	pp. 9-10
	7b	D;V	Report any actions to blind assessment of predictors for the outcome and other predictors.	p. 7
Sample size	8	D;V	Explain how the study size was arrived at.	p. 10
Missing data	9	D;V	Describe how missing data were handled (e.g., complete-case analysis, single	p. 10
g data			imputation, multiple imputation) with details of any imputation method.	
	10a	D	Describe how predictors were handled in the analyses. Specify type of model, all model-building procedures (including any predictor selection),	pp. 9-10 & p.1
Statistical	10b	D	and method for internal validation.	p. 12
analysis	10c	V	For validation, describe how the predictions were calculated.	р. 12-13
methods			Specify all measures used to assess model performance and, if relevant, to compare	
	10d	D;V	multiple models.	pp.12-13
	10e	V	Describe any model updating (e.g., recalibration) arising from the validation, if done.	pp. 12-12
Risk groups	11	D;V	Provide details on how risk groups were created, if done.	N/A
Development vs. validation	12	V	For validation, identify any differences from the development data in setting, eligibility criteria, outcome, and predictors.	N/A (geographica validation afte sample split)
Results				
	1		Describe the flow of participants through the study, including the number of participants	
	13a	D;V	with and without the outcome and, if applicable, a summary of the follow-up time. A diagram may be helpful.	Figure 1 and table 1
Participants	13a 13b	D;V	diagram may be helpful. Describe the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome.	Figure 1 and table 1 Table 1 & pp 14-16
Participants	13b	•	diagram may be helpful. Describe the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome. For validation, show a comparison with the development data of the distribution of	table 1 Table 1 & pp 14-16 Table 1 &
Participants	13b 13c	D;V V	diagram may be helpful. Describe the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome. For validation, show a comparison with the development data of the distribution of important variables (demographics, predictors and outcome).	Table 1 & pp 14-16 Table 1 & pp.14-16
Model	13b 13c 14a	D;V V D	diagram may be helpful. Describe the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome. For validation, show a comparison with the development data of the distribution of important variables (demographics, predictors and outcome). Specify the number of participants and outcome events in each analysis.	table 1 Table 1 & pp 14-16 Table 1 & pp.14-16 Table 1
	13b 13c 14a 14b	D;V V	diagram may be helpful. Describe the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome. For validation, show a comparison with the development data of the distribution of important variables (demographics, predictors and outcome). Specify the number of participants and outcome events in each analysis. If done, report the unadjusted association between each candidate predictor and outcome.	Table 1 & pp 14-16 Table 1 & pp.14-16
Model	13b 13c 14a 14b	D;V V D D	diagram may be helpful. Describe the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome. For validation, show a comparison with the development data of the distribution of important variables (demographics, predictors and outcome). Specify the number of participants and outcome events in each analysis. If done, report the unadjusted association between each candidate predictor and outcome. Present the full prediction model to allow predictions for individuals (i.e., all regression coefficients, and model intercept or baseline survival at a given time point).	table 1 Table 1 & pp 14-16 Table 1 & pp.14-16 Table 1 Table 2 Table 3
Model development Model specification	13b 13c 14a 14b	D;V V D	diagram may be helpful. Describe the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome. For validation, show a comparison with the development data of the distribution of important variables (demographics, predictors and outcome). Specify the number of participants and outcome events in each analysis. If done, report the unadjusted association between each candidate predictor and outcome. Present the full prediction model to allow predictions for individuals (i.e., all regression	table 1 Table 1 & pp 14-16 Table 1 & pp.14-16 Table 1 Table 2
Model development	13b 13c 14a 14b	D;V V D D	diagram may be helpful.
