

Supplementary Figure 2: Analysis of Liposomes and tumor derived MVs by flow cytometry

Fluorescent Nile Red particles with size between 100-300 nm were used as reference (panel a) for the gating of Liposomes and microvesicle samples. Gating of Liposomes (panel b), MV_{Asc} (panel c) and MV_{MUC1-DG75} (panel d). Results are reported in dot plot. x axis: FSC-A; y axis: SSC-A.
