

Adenovirus-mediated delivery of Sema3A alleviates rheumatoid arthritis in a serum-transfer induced mouse model

SUPPLEMENTARY MATERIALS

Supplementary Figure 1: The percentage of CD206 positive cells determined by FACS.

Supplementary Figure 2: The M1 markers were significantly reduced, while M2 markers were increased after Sema3A treatment in RAW264.7 cells. * P< 0.05, ** P< 0.01.

Supplementary Table 1: Primer sequences for PCR analysis
